Embracing Model Transformations In Requirements Specification A Step Towards Automated Requirements Engineering:

Embracing Model Transformations in Requirements Specification Yasser Ali Khan, 2013 Model transformation is an automated technique that can greatly improve several software development activities This thesis presents an approach that leverages model transformation to execute Use Case model refactorings and transform Use Case Map scenario specifications into UML 2 Activity Diagram and Sequence Diagram notations The proposed approach will present a case for software developers to embrace the notion of model transformation in the context of Functional Requirements Specification Furthermore a fault based technique is proposed for thorough verification of model transformations Case studies are presented for evaluating the effectiveness of the proposed approach The results obtained show that model transformations can efficiently improve Functional Requirements Specification by saving time and effort

Netcentric System of Systems Engineering with DEVS Unified Process Saurabh Mittal, José L. Risco Martín, 2018-09-03 In areas such as military security aerospace and disaster management the need for performance optimization and interoperability among heterogeneous systems is increasingly important Model driven engineering a paradigm in which the model becomes the actual software offers a promising approach toward systems of systems SoS engineering However model driven engineering has largely been unachieved in complex dynamical systems and netcentric SoS partly because modeling and simulation M S frameworks are stove piped and not designed for SoS composability Addressing this gap Netcentric System of Systems Engineering with DEVS Unified Process presents a methodology for realizing the model driven engineering vision and netcentric SoS using DEVS Unified Process DUNIP The authors draw on their experience with Discrete Event Systems Specification DEVS formalism System Entity Structure SES theory and applying model driven engineering in the context of a netcentric SoS They describe formal model driven engineering methods for netcentric M S using standards based approaches to develop and test complex dynamic models with DUNIP The book is organized into five sections Section I introduces undergraduate students and novices to the world of DEVS It covers systems and SoS M S as well as DEVS formalism software modeling language and DUNIP It also assesses

DUNIP with the requirements of the Department of Defense's DoD Open Unified Technical Framework OpenUTF for netcentric Test and Evaluation T E Section II delves into M S based systems engineering for graduate students advanced practitioners and industry professionals It provides methodologies to apply M S principles to SoS design and reviews the development of executable architectures based on a framework such as the Department of Defense Architecture Framework DoDAF It also describes an approach for building netcentric knowledge based contingency driven systems Section III guides graduate students advanced DEVS users and industry professionals who are interested in building DEVS virtual machines and netcentric SoS It discusses modeling standardization the deployment of models and simulators in a netcentric environment event driven architectures and more Section IV explores real world case studies that realize many of the concepts defined in the previous chapters Section V outlines the next steps and looks at how the modeling of netcentric complex adaptive systems can be attempted using DEVS concepts It touches on the boundaries of DEVS formalism and the future work needed to utilize advanced concepts like weak and strong emergence self organization scale free systems run time modularity and event interoperability This groundbreaking work details how DUNIP offers a well structured platform independent methodology for the modeling and simulation of netcentric system of systems *Reliable Software Technologies - Ada-Europe 2016* Marko Bertogna, Luís Miguel Pinho, Eduardo Quiñones, 2016-05-30 This book constitutes the refereed proceedings of the 21st Ada Europe International Conference on Reliable Software Technologies Ada Europe 2016 held in Pisa Italy in June 2016 The revised 12 full papers presented together with one invited paper were carefully reviewed and selected from 28 submissions They are organized in topical sections on concurrency and parallelism testing and verification program correctness and robustness and real time systems *Digital Transformation in the Construction Industry* Ehsan Noroozinejad Farsangi, Mohammad Noori, T.Y.
