 Both a challenge to mathematically inclined readers and a useful supplementary text for high school and college courses One
 Hundred Problems in Elementary Mathematics presents an instructive stimulating collection of problems Many problems
 address such matters as numbers equations inequalities points polygons circles ellipses space polyhedra and spheres An
 equal number deal with more amusing or more practical subjects such as a picnic ham blood groups rooks on a chessboard
 and the doings of the ingenious Dr Abracadabrus Are the problems in this book really elementary Perhaps not in the lay
 reader's sense for anyone who desires to solve these problems must know a fair amount of mathematics up to calculus
 Nevertheless Professor Steinhaus has given complete detailed solutions to every one of his 100 problems and anyone who
 works through the solutions will painlessly learn an astonishing amount of mathematics A final chapter provides a true test
 for the most proficient readers 13 additional unsolved problems including some for which the author himself does not know

 algebra relativity theory and the works of David Hilbert Most have been long unavailable or previously unpublished in book
 form 2012 edition *Probabilistic Metric Spaces* B. Schweizer, A. Sklar, 2011-11-30 This distinctly nonclassical treatment
 focuses on developing aspects that differ from the theory of ordinary metric spaces working directly with probability
 distribution functions rather than random variables The two part treatment begins with an overview that discusses the theory

s historical evolution followed by a development of related mathematical machinery The presentation defines all needed concepts states all necessary results and provides relevant proofs The second part opens with definitions of probabilistic metric spaces and proceeds to examinations of special classes of probabilistic metric spaces topologies and several related structures such as probabilistic normed and inner product spaces Throughout the authors focus on developing aspects that differ from the theory of ordinary metric spaces rather than simply transferring known metric space results to a more general setting
