Anyone interested in comparative biology or the history of science will find this myth busting work genuinely fascinating It draws attention to the seminal studies and important advances that have shaped systematic and biogeographic thinking It traces concepts in homology and classification from the 19th century to the present through the provision of a unique anthology of scientific writings from Goethe Agassiz Owen Naef Zangerl and Nelson among others **Foundations of Paleoeecology** S. Kathleen Lyons, Anna K. Behrensmeyer, Peter J. Wagner, 2019-12-13 Approximately 99% of all life that has ever existed is extinct Fortunately these long dead species have left traces of their lives and interactions with other species in the rock record that paleoecologists use to understand how species and ecosystems have changed over time This record of past life allows us to study the dynamic nature of the Earth and gives context to current and future ecological challenges This book brings together forty four classic papers published between 1924 and 1999 that trace the origins and development of paleoecology The articles cross taxonomic groups habitat types geographic areas and time and have made substantial contributions to our knowledge of the evolution of life Encompassing the full breadth of paleoecology the book is divided into six parts community and ecosystem dynamics community reconstruction diversity dynamics paleoenvironmental reconstruction species interaction and taphonomy Each paper is also introduced by a contemporary expert who gives context and explains its importance to ongoing paleoecological research A comprehensive introduction to the field Foundations of Paleoeecology will be an essential reference for new students and established paleoecologists alike **Morphology of**

Meeuse, 2023-12-18 *Principles of Dispersal in Higher Plants* L. van der Pijl, 2012-12-06 Reviewers from diverse branches of botany have exerted pressure to have chapters dealing with their field extended If only to cover his incompetence the author could not accede to these requests Nor was it possible to respond to Eastern European urgings to extend the classificatory terminology especially in Chapter X He is grateful for indications of factual shortcomings in the

chosen field especially for those by Dr RUDOLF SCHMID Ann Arbor who provided extensive comment L VAN DER PIJL The Hague spring 1972 Preface to the First Edition The work offered here is a companion volume to the work by K FAEGRI and L VAN DER PIJL Principles of Pollination Ecology which deals with the preceding phase of reproduction in plants In the present work too the emphasis is on principles and ecology It is neither an enumeration of mechanisms nor a compilation of cases RIDLEY S monumental work The Dispersal of Plants Throughout the World comprises 700 large pages of small print and research has proceeded since then Though this work is more than just a compilation and contains much insight and thoughts on principles in addition to reviews its completeness hinders its use as a text book As a reference work it is unsurpassed and the writer made frequent use of it The writer paid special attention to functional backgrounds for the use of taxonomists working with characters and to biosystematics at the macro level

Axioms and Principles of Plant Construction R. Sattler, 2012-12-06 This volume presents the proceedings of a symposium which I organised for the Developmental Section of the XIIIth International Botanical Congress at Sydney Australia on August 26 1981 The paper by Professor T Sachs which was received too late for inclusion into the symposium at Sydney was added to these proceedings because of its direct relevancy and importance The aim of the symposium was to state in an explicit and comprehensive fashion the most basic axioms and principles of plant morphology and morphogenesis An awareness of these axioms and principles is of paramount importance since they form the foundations as well as the goal of structural developmental botany Both teaching and research are predicated on them The Introduction by the editor briefly examines the meaning of the concepts axiom principle and plant construction The comprehensive paper by Dr G Cusset a unique historical overview explicates 37 principles of 5 major conceptual systems and many subsystems The extensive analysis includes a genealogy of ideas and ways of thinking of major authors ranging from philosophers and naturalists of antiquity to recent investigators of plant form and structure The bibliography of Dr Cusset's paper comprises ca 700 references The contribution by Professor H Mohr focusses on modern principles of morphogenesis and provides a penetrating analysis of scientific explanation in developmental biology The universal principles laws described in this paper apply to all living systems whereas the more specific principles are limited to plants or only higher plants Professor T

Fundamentals of Palaeobotany Sergei Meyen, 2012-12-06 There have been at least ten English language textbooks of palaeobotany since D H Scott published the first edition of Studies in Fossil Botany in 1900 Most have been written by scientists who were primarily botanists by training and were aimed largely at a readership familiar with living plants They tended to follow a general pattern of an introductory chapter on preservation of plants as fossils followed by a systematic treatment group by group Only Seward in his Plant Life Through the Ages departed from this pattern in presenting a chronological sequence In the present book Meyen breaks with this tradition Although having a basically biological approach he reaches out into all aspects of the history of plant life and the wider implication of its study Only half of the present work deals sequentially with fossil plant groups treated systematically The remainder then explores

those topics which most other textbooks have incidentally e generally either ignored or have only mentioned rather problems of naming and classifying fragmentary plant fossils their ecology biogeography and palaeoclimatic significance and the contribution that ey have made to the understanding of living plant morphology and of the process of evolution
