Collective Identity, Oppression, and the Right to Self-Ascription Andrew J. Pierce, 2012-05-31 Collective Identity Oppression and the Right to Self Ascription argues that groups have an irreducibly collective right to determine the meaning of their shared group identity and that such a right is especially important for historically oppressed groups The author specifies this right by way of a modified discourse ethic demonstrating that it can provide the foundation for a conception of identity politics that avoids many of its usual pitfalls The focus throughout is on racial identity which provides a test case for the theory That is it investigates what it would mean for racial identities to be self ascribed rather than imposed establishing the possible role racial identity might play in a just society The book thus makes a unique contribution to both the field of critical theory which has been woefully silent on issues of race and to race theory which often either presumes that a just society would be a raceless society or focuses primarily on understanding existing racial inequalities in the manner typical of so called non ideal theory *Transactions on Computational Collective Intelligence XIII* Ngoc Thanh Nguyen, Hoai An Le Thi, 2014-02-07 These transactions publish research in computer based methods of computational collective intelligence CCI and their applications in a wide range of fields such as the semantic web social networks and multi agent systems TCCI strives to cover new methodological theoretical and practical aspects of CCI understood as the form of intelligence that emerges from the collaboration and competition of many individuals artificial and or natural The application of multiple computational intelligence technologies such as fuzzy systems evolutionary computation neural systems consensus theory etc aims to support human and other collective intelligence and to create new forms of CCI in natural and or artificial systems This eleventh issue contains 9 carefully selected and thoroughly revised contributions ... **International Exhibition, 1876: Reports and awards. In Integration Proposal for Description Logic and Attributive Logic Towards Semantic Web Rules G Nalepa and W Furmanska propose a transition from attributive logic to description logic in order to improve the design of Semantic Web rules K Thorisson et al Collective Action in the Formation of Pre-Modern States Richard Blanton, Lane Fargher, 2007-10-30 Anthropological archaeology and other disciplines concerned with the formation of early complex societies are undergoing a theoretical shift stemming from the realization that the social evolution of complex societies was more varied and complex than imagined Given the need for new directions in theory the book proposes that anthropologists look to political science especially the rational choice theory of collective action Collective action theorists propose that state formation results from the strategic behavior of rational and self interested actors who make up the polity including a political elite and those outside the official structure of the state The theory proposes that the form taken by a state will depend on the bargaining power of rulers and taxpayers Where taxpayers have more resources with which to bargain it is predicted that rulers will concede benefits to taxpayers and will agree to restrictions on their power The authors subject collective action theory to a methodologically rigorous evaluation using systematic cross cultural analysis based on a world wide sample of societies The results presented here indicate strong support for most elements of the theory but some results in particular those pertaining to the control of ruler behavior suggest the possibility that there are contexts in which collective action may play out in ways not anticipated by the theory While this type of theoretical modeling is commonly seen in political science research this volume is unique in its approach from an anthropological and archaeological viewpoint *Decisions and Orders of the National Labor Relations Board* United States. Collective Bargaining for Police and Other Essential Services Giuseppe Carabetta, 2024-10-14 This book examines how collective bargaining disputes are resolved among police and essential service employees In Australia as in other common law countries police and other highly essential employees such as fire fighters and ambulance officers have long had access to a form of binding arbitration to settle collective bargaining disputes The traditional arbitration based system in Australia has however been replaced in recent decades with a marked based collective bargaining system The current Fair Work system restricts access to arbitration favouring collective bargaining based on the parties prerogative to make their own agreements and supported by a limited right to industrial action including strikes during bargaining Yet police officers particularly are subject to considerable restraints on any entitlement to participate in industrial action The problem is that with limited access to arbitration and an especially limited right to industrial action intractable disputes may continue indefinitely without any impasse breaking process to prevent the flow on harms of long running police disputes This raises

the essential question underpinning this study what form of dispute resolution system is appropriate to protect both the legitimate industrial interests of police officers and the community's interest in the uninterrupted provision of essential policing services The author in his extensive field work research and his study of international case studies has developed a useful model for mandatory interest arbitration among police and other essential services personnel The lessons and recommendations in the book offer insights for essential services labour law in Australia and overseas

Collective Bargaining Developments in Times of Crisis Sylvaine Laulom, 2016-04-24 In many EU Member States the various economic crises of recent years provided grounds for a rarely equalled level of state intervention in the regulation of labour relations with an explicit aim the decentralisation of collective bargaining An extensive body of research summed up and analysed expertly in the chapters of this very important book reveals that the process of decentralisation has more often than not led to a situation where salaries and labour conditions are ever more frequently determined by direct negotiations between employer and employees with the State becoming the sole guarantor of employee protection even as it encourages decreasing labour costs to ensure that companies remain competitive The comparative approach offered in this book adds to this synthesis by providing examples of specific recent developments in fourteen Member States and Turkey Among the numerous topics and issues that arise are the following opt out clauses that derogate unfavourably from sectoral agreement standards extension of the employer's unilateral decision making power memoranda of understanding imposed by the troika EU ECB and IMF and stand by arrangements imposed by the IMF However notwithstanding the strong emphasis on changing the structure of collective agreements by shifting the centre of gravity closer to the company research finds promise in the reconstituted support for sector level agreements increasingly found among very small businesses networked businesses and work via digital platforms This is the first book to take stock of the current state of collective bargaining in Europe It is an essential study for labour and employment law practitioners and an exemplary analysis of immeasurable value to policymakers and academics in the field
