Future Science Essays From The Cutting Edge:

Future Science Max Brockman, 2011-08-09 In this fascinating collection of writings that introduce the very latest theories and discoveries in science editor Max Brockman presents the work of some of today's brightest and most innovative young researchers Future Science features eighteen young scientists most of whom are presenting their work and ideas to a general audience for the first time Included in this collection are William McEwan a virologist discussing his research into the biology of antiviral immunity Naomi Eisenberger a neuroscientist wondering how social rejection affects us physically Jon Kleinberg a computer scientist showing what massive datasets can teach us about society and ourselves Anthony Aguirre a physicist who gives readers a tantalizing glimpse of infinity Future Science shares with the world a delightful secret that we academics have been keeping that despite all the hysteria about how electronic media are dumbing down the next generation a tidal wave of talent has been flooding into science making their elders feel like the dumb ones It has a wealth of new and exciting ideas and will help shake up our notions regarding the age sex color and topic clichés of the current public perception of science Steven Pinker author of *The Stuff of Thought* [Future Science](#) Max Brockman, 2011-10-13 From 19 talented young scientists comes an exciting volume of essays about the future of science Including cutting edge research across a wide range of fields we make exciting new discoveries about some of the most interesting scientific problems today from neuroscience and evolutionary psychology to plant populations and oceanography **Sex, Lies, & Brain Scans** B. J. Sahakian, Julia Gottwald, 2017 This book considers what the technique of fMRI entails and what information it can give us showing which applications are possible today and which ones are science fiction It also looks at the important ethical questions these techniques raise [The Cambridge Handbook of Evolutionary Perspectives on Human Behavior](#) Lance Workman, Will Reader, Jerome H. Barkow, 2020-03-19 The transformative wave of Darwinian insight continues to expand throughout the human sciences While still centered on evolution focused fields such as evolutionary psychology ethology and human behavioral ecology this insight has also influenced cognitive science neuroscience feminist discourse sociocultural anthropology media studies and clinical psychology This handbook's goal is to amplify the wave by bringing together world leading experts to provide a comprehensive and up to date overview of evolution oriented and influenced fields While evolutionary psychology remains at the core of the collection it also covers the history current standing debates and future directions of the panoply of fields entering the Darwinian fold As such *The Cambridge Handbook of Evolutionary Perspectives on Human Behavior* is a valuable reference not just for evolutionary psychologists but also for scholars and students from many fields who wish to see how the evolutionary perspective is relevant to their own work [God and Popular Culture](#) Stephen Butler Murray, Aimée Upjohn Light, 2015-08-11 This contributed two volume work tackles a fascinating topic how and why God plays a central role in the modern world and profoundly influences politics art culture and our moral reflection even for nonbelievers God in the many ways that people around the globe conceptualize Him Her or It is one of the most

powerful divisive unifying and creative elements of human culture The two volumes of God and Popular Culture A Behind the Scenes Look at the Entertainment Industry s Most Influential Figure provide readers with a balanced and accessible analysis of this fascinating topic that allows anyone who appreciates any art music television film and other forms of entertainment to have a new perspective on a favorite song or movie Written by a collective of both believers and nonbelievers the essays enable both nonreligious individuals and those who are spiritually guided to consider how culture approaches and has appropriated God to reveal truths about humanity and society The book discusses the intersections of God with film television sports politics commerce and popular culture thereby documenting how the ongoing messages and conversations about God that occur among the general population also occur within the context of the entertainment that we as members of society consume often without our recognition of the discussion

Rekindle the Spark Barbara Duff, Clear concise and practical Rekindle the Spark provides an at home programme of interactive exercises that explore common relationship problems and enable you to acquire skills and strategies to help create and maintain a bond that is happy and healthy Bullying:

perspectives, practice and insights Janice Richardson, Elizabeth Milovidov, Roger Blamire, 2017-04-01 Bullying is one of the most difficult areas of violence against children to eliminate especially with the ubiquitous role that internet and mobile technology plays in their life today and the capacity this gives for bullying to continue night and day Bullying seems to be part of human nature and has been with us since ancient times but that is no reason to accept it fatalistically as natural and for children part of growing up Only in the 1970s was research first undertaken to explore the phenomenon and to attempt to understand why it takes place and its impact on individuals and societies With the emergence of the internet and social media bullying has taken a more sinister turn becoming more relentless constant and inescapable for victims This book aims to explain to both experts and the interested layperson what is known about bullying its causes effects and crucially how it can be reduced in particular by fostering social and emotional skills in young people Authors from more than a dozen countries have contributed to this publication presenting widely differing perspectives practice and insights on how they are tackling or think we should be tackling modern societal issues such as bullying and hate speech While some chapters focus more specifically on case studies and what the research tells us others look at issues related to bringing up and educating children for the world we live in This publication also provides information on the work of the ENABLE network and aims to introduce readers to the psychologists and researchers teachers parents and social media innovators that have helped to shape it

Love in the Time of Algorithms Dan Slater, 2013-01-24 If online dating can blunt the emotional pain of separation if adults can afford to be increasingly demanding about what they want from a relationship the effect of online dating seems positive But what if it s also the case that the prospect of finding an ever more compatible mate with the click of a mouse means a future of relationship instability a paradox of choice that keeps us chasing the illusive bunny around the dating track It s the mother of all search problems how to find a spouse a mate a date The escalating marriage age and declin

ing marriage rate mean we're spending a greater portion of our lives unattached searching for love well into our thirties and forties. It's no wonder that a third of America's 90 million singles are turning to dating Web sites. Once considered the realm of the lonely and desperate, sites like eHarmony, Match, OkCupid, and Plenty of Fish have been embraced by pretty much every demographic. Thanks to the increasingly efficient algorithms that power these sites, dating has been transformed from a daunting transaction based on scarcity to one in which the possibilities are almost endless. Now anyone young, old, straight, gay, and even married can search for exactly what they want, connect with more people, and get more information about those people than ever before. As journalist Dan Slater shows, online dating is changing society in more profound ways than we imagine. He explores how these new technologies, by altering our perception of what's possible, are reconditioning our feelings about commitment and challenging the traditional paradigm of adult life. Like the sexual revolution of the 1960s and 70s, the digital revolution is forcing us to ask new questions about what constitutes normal. Why should we settle for someone who falls short of our expectations if there are thousands of other options just a click away? Can commitment thrive in a world of unlimited choice? Can chemistry really be quantified by math geeks? As one of Slater's subjects wonders, What's the etiquette here? Blending history, psychology, and interviews with site creators and users, Slater takes readers behind the scenes of a fascinating business. Dating sites capitalize on our quest for love, but how do their creators' ideas about profits, morality, and the nature of desire shape the virtual worlds they've created for us? Should we trust an industry whose revenue model benefits from our avoiding monogamy? Documenting the untold story of the online dating industry's rise from ignominy to ubiquity, beginning with its early days as computer dating at Harvard in 1965, Slater offers a lively, entertaining, and thought-provoking account of how we have, for better and worse, embraced technology in the most intimate aspect of our lives.

The Blind Storyteller Iris Berent, 2020-04-01 Do newborns think? Do they know that three is greater than two? Do they prefer right to wrong? What about emotions: can newborns recognize happiness or anger? If the answer to these questions is yes, then how are our inborn thoughts and feelings encoded in our bodies? Could they persist after we die? Going all the way back to ancient Greece, human nature and the mind-body problem have been the topics of fierce scholarly debates. But laypeople also have strong opinions about such matters. Most people believe, for example, that newborn babies don't know the difference between right and wrong; such knowledge, they insist, can only be learned. For emotions, they presume the opposite: that our capacity to feel fear, for example, is both inborn and embodied. These beliefs are stories we tell ourselves about what we know and who we are. They reflect and influence our understanding of ourselves and others, and they guide every aspect of our lives. In *The Blind Storyteller*, the cognitive psychologist Iris Berent exposes a chasm between our intuitive understanding of human nature and the conclusions emerging from science. Her conclusions show that many of our stories are misguided. Just like Homer, we the storyteller are blind. How could we get it so wrong? In a twist that could have come out of a Greek tragedy, Berent proposes that our errors are our fate. These mistakes emanate from the very principles that make

our minds tick Our blindness to human nature is rooted in human nature itself An intellectual journey that draws on philosophy anthropology linguistics cognitive science and Berent's own cutting edge research The Blind Storyteller grapples with a host of provocative questions from why we are so afraid of zombies to whether dyslexia is just in our heads from what happens to us when we die to why we are so infatuated with our brains The end result is a startling new perspective on the age old nature nurture debate and on what it means to be human A Million First Dates Dan Slater,2014-01-28 Previously published in hardcover as Love in the Time of Algorithms Once considered the realm of the lonely and desperate sites like eHarmony Match OkCupid and Plenty of Fish have been embraced by pretty much every demographic Dating has been transformed from a daunting transaction based on scarcity to one in which the possibilities are almost endless Now anyone can search for exactly what they want connect with more people and get more information about those people than ever before As journalist Dan Slater shows online dating is changing society in more profound ways than we imagine He explores how these new technologies by altering our perception of what's possible are reconditioning our feelings about commitment and challenging the traditional paradigm of adult life Slater takes readers behind the scenes of a fascinating business Dating sites capitalize on our quest for love but how do their creators ideas about pro ts morality and the nature of desire shape the virtual worlds they've created for us The Handbook of Evolutionary Psychology, Volume 1 David M. Buss,2015-11-02 The indispensable reference tool for the groundbreaking science of evolutionary psychology Why is the mind designed the way it is How does input from the environment interact with the mind to produce behavior These are the big unanswered questions that the field of evolutionary psychology seeks to explore The Handbook of Evolutionary Psychology is the seminal work in this vibrant quickly developing new discipline In this thorough revision and expansion luminaries in the field provide an in depth exploration of the foundations of evolutionary psychology and explain the new empirical discoveries and theoretical developments that continue at a breathtaking pace Evolutionary psychologists posit that the mind has a specialized and complex structure just as the body has a specialized and complex structure From this important theoretical concept arises the vast array of possibilities that are at the core of the field which seeks to examine such traits as perception language and memory from an evolutionary perspective This examination is intended to determine the human psychological traits that are the products of sexual and natural selection and as such to chart and understand human nature Join the discussion of the big questions addressed by the burgeoning field of evolutionary psychology Explore the foundations of evolutionary psychology from theory and methods to the thoughts of EP critics Discover the psychology of human survival mating parenting cooperation and conflict culture and more Identify how evolutionary psychology is interwoven with other academic subjects and traditional psychological disciplines The Handbook of Evolutionary Psychology is the definitive guide for every psychologist and student interested in keeping abreast of new ideas in this quickly developing field *Reconstructing 'Education' through Mindful Attention* Oren Ergas,2017-01-21 This book reconstructs the idea and practice of education

Rather than conceiving of education as a process we undergo in which our minds are shaped by a social vision Oren Ergas turns this notion of education on its head arguing instead that we ourselves construct education The multitude of problems with formal education and schooling such as violence inequality and low achievements are then seen as reflections of problems of the mind meaning that close study of the mind is necessary if these problems are to be successfully tackled Through philosophy neuroscience and psychology this book proposes a new perspective on educational theory practice and research It will be of great interest to students and teachers scholars of education and educational policy makers

Empirical Research and Normative Theory Alexander Max Bauer, Malte Meyerhuber, 2020-04-20 Two questions often shape our view of the world On the one hand we ask what there is on the other hand we ask what there ought to be Empirical research and normative theory the methodological traditions concerned with these questions entered a difficult relationship from at least as early as around the time of the advent of modern sciences To this day there remains a strong separation between the two domains with both tending to neglect discourses and results from the other Contrary to a verdict of strict segregation between is and ought there are nowadays various attempts to integrate both theoretical approaches This calls for a discourse on the relation between empirical research and normative theory In this volume scholars from different disciplines including psychology sociology economics and philosophy discuss the possible desired or undesired influences on and limits of the integration of these two approaches

Philosophy of Mind in the Twentieth and Twenty-First Centuries Amy Kind, 2018-07-06 While the philosophical study of mind has always required philosophers to attend to the scientific developments of their day from the twentieth century onwards it has been especially influenced and informed by psychology neuroscience and computer science *Philosophy of Mind in the Twentieth and Twenty First Centuries* provides an outstanding survey of the most prominent themes in twentieth century and contemporary philosophy of mind It also looks to the future offering cautious predictions about developments in the field in the years to come Following an introduction by Amy Kind twelve specially commissioned chapters by an international team of contributors discuss key topics thinkers and debates including the phenomenological tradition the mind body problem theories of consciousness theories of perception theories of personal identity mental causation intentionality Wittgenstein and his legacy cognitive science and future directions for philosophy of mind Essential reading for students and researchers in philosophy of mind and philosophy of psychology *Philosophy of Mind in the Twentieth and Twenty First Centuries* is also a valuable resource for those in related disciplines such as psychology and cognitive science

Towards Equity in Mathematics Education Helen Forgasz, Ferdinand Rivera, 2012-03-19 This volume gathers together twenty major chapters that tackle a variety of issues associated with equity in mathematics education along the dimensions of gender culture curriculum diversity and matters of a biological nature The pursuit of equity in mathematics education is an important concern in the history of the present Since there is no doubt about the significant role of mathematics in almost every aspect of life it means that all individuals regardless of sex in any age

range and in whatever context need to be provided with an opportunity to become mathematically able The publication of this Springer volume on equity in mathematics education is situated at a time when there is strong and sustained research evidence indicating the persistence of an equity gap in mathematics which has now enabled the mathematics education community to engage in a discourse of access for all The research studies that are reported and discussed in the volume have been drawn from an international group of distinguished scholars whose impressive forward looking and thought provoking perspectives on relevant issues incite broaden and expand complicated conversations on how we might effectively achieve equity in mathematics education at the local institutional and systemic levels Further the up to date research knowledge in the field that is reflected in this volume provides conceptual and practical outlines for mechanisms of change including models examples and usable theories that can inform the development of powerful equitable practices and the mobilization of meaningful equity interventions in different contexts of mathematics education

Analyzing Political Communication with Digital Trace Data Andreas Jungherr, 2015-06-12 This book offers a framework for the analysis of political communication in election campaigns based on digital trace data that documents political behavior interests and opinions The author investigates the data generating processes leading users to interact with digital services in politically relevant contexts These interactions produce digital traces which in turn can be analyzed to draw inferences on political events or the phenomena that give rise to them Various factors mediate the image of political reality emerging from digital trace data such as the users of digital services political interests attitudes or attention to politics In order to arrive at valid inferences about the political reality on the basis of digital trace data these mediating factors have to be accounted for The author presents this interpretative framework in a detailed analysis of Twitter messages referring to politics in the context of the 2009 federal elections in Germany This book will appeal to scholars interested in the field of political communication as well as practitioners active in the political arena

Making a Difference in Marketing Jonathan Cahill, 2017-03-16 Establishing a difference is the lynchpin of marketing It can be achieved in many ways The results can be magical and powerful such as increasing with little expense the price of a little regarded fish from 0.15 a kilo to 1.00 As with many other disciplines which have great value this potency has often resulted in the discussion of marketing being prey to increasing complexity This frequently intimidates those marketing could help Often it is due to the touting of supposedly new paradigms given plausibility by conveniently invented metrics and an emphasis on the rational and conscious over the

emotional and unconscious despite the latter aspects appearing to be the basis for much choice This imbalance has been highlighted by recent insights from psychology neurology and behavioural economics Rather than simply embracing these advances the focus of marketing has been on additional layers of intricacy and a weighting of emphasis towards means of communication further distancing marketing from its base This book aims to cut through to the pivotal role of differentiation illustrated by case histories and the advances in the related fields referred to particularly the work of psychologists such as Daniel Kahneman Unlike much writing on marketing it has tried to follow Einstein s advice to be as simple as possible but no simpler

Teaching and Learning Patterns in School Mathematics Ferdinand Rivera,2014-07-08 This book synthesizes research findings on patterns in the last twenty years or so in order to argue for a theory of graded representations in pattern generalization While research results drawn from investigations conducted with different age level groups have sufficiently demonstrated varying shifts in structural awareness and competence which influence the eventual shape of an intended generalization such shifts however are not necessarily permanent due to other pertinent factors such as the complexity of patterning tasks The book proposes an alternative view of pattern generalization that is one that is not about shifts or transition phases but graded depending on individual experiences with target patterns The theory of graded representations involving pattern generalization offers a much more robust understanding of differences in patterning competence since it is sensitive to varying levels of entry into generalization Empirical evidence will be provided to demonstrate this alternative view which is drawn from the author s longitudinal work with elementary and middle school children including several investigations conducted with preservice elementary majors Two chapters of the book will be devoted to extending pattern generalization activity to arithmetic and algebraic learning of concepts and processes The concluding chapter addresses the pedagogical significance of pattern learning in the school mathematics curriculum
