architecture ever more important as there is stronger demand for faster smaller cheaper and lower power programmable logic PLDs are 90% routing and 10% logic This book focuses on that 90% that is the programmable routing the manner in which the programmable wires are connected and the circuit design of the programmable switches themselves Anyone seeking to understand the design of an FPGA needs to become lit erate in the complexities of programmable routing architecture This book builds on the state of the art of programmable interconnect by providing new methods of investigating and measuring interconnect structures as well as new programmable switch basic circuits The early portion of this book provides an excellent survey of interconnec tion structures and circuits as they exist today Lemieux and Lewis then provide a new way to design sparse crossbars as they are used in PLDs and show that the method works with an empirical validation This is one of a few routing architecture works that employ analytical methods to deal with the routing archi tecture design The analysis permits interesting insights not typically possible with the standard empirical approach   Peer-to-Peer Systems Peter Druschel,Frans Kaashoek,Antony Rowstron,2002-01-01 Peer to peer has emerged as a promising new paradigm for large scale distributed computing The International Workshop on Peer to Peer Systems IPTPS aimed to provide a forum for researchers active in peer to peer computing to discuss the state of the art and to identify key research challenges The goal of the workshop was to examine peer to peer technologies appli tions and systems and also to identify key research issues and challenges that lie ahead In the context of this workshop peer to peer systems were characterized as being decentralized self organizing distributed systems in which all or most communication is symmetric The program of the workshop was a combination of invited talks pres tations of position papers and discussions covering novel peer to peer appli tions and systems peer to peer infrastructure security in peer to peer systems anonymity and anti censorship performance of peer to peer systems and wo load characterization for peer to peer systems To ensure a productive workshop environment attendance was limited to 55 participants Each potential participant was asked to submit a position paper of 5 pages that exposed a new problem advocated a speci c solution or reported on actual experience We received 99 submissions and were able to accept 31 Participants were invited based on the originality technical merit and topical relevance of their submissions as well as the likelihood that the ideas expressed in their submissions would lead to insightful technical discussions at the workshop   *Contributions To Information Integration Theory* Norman H. Anderson,2014-01-02 The theory of information integration provides a unified general approach to the three disciplines of cognitive social and developmental psychology Each of these volumes illustrates how the concepts and methods of this experimentally grounded theory may be productively applied to core problems in one of these three disciplines
