study transport and mobility and outlines the different intellectual trajectories of transport geography and geographies of mobilities Part III then outlines and discusses the discourse of sustainable mobility that has emerged in recent years the ways in which social economic and environmental sustainability can be promoted through different strategies focusing on behavioural change and urban design Geographies of Transport and Mobility provides a unique perspective on personal mobility by demonstrating how the way we travel has developed through complex economic and social processes It argues that this historical context is critical for considering how mobility in the twenty first century can be more sustainable not just environmentally but also economically and socially As such it argues for a renewed focus on sustainable place making as a way to radically shift mobility practices Geographies of Transport and Mobility is designed to appeal to advanced level undergraduate students and researchers in the fields of geography anthropology psychology sociology and transport studies
