Part 2: Relative Dating

Vocabulary:

Index Fossils – fossils used by geologists to date the age of rock layers.

Geologic Column – a non-existing model of the Earth's rock layers pieced together from multiple locations.

Law of Superposition – sedimentary rock layers on top are younger than rock layers on bottom.

Law of Cross Cutting Relationships – rock layers that cut through other rock layers are younger than the layers they cut through.

Law of Original Horizontality– sedimentary rocks are originally laid horizontally due to gravity. Any folds, bends, faults occur later and therefore are older than horizontal rock layers.

Inclusion/Intrusion – igneous rocks that are surrounded by other rock types, mainly due to lava/magma flows.

Unconformity – missing or irregular layering or shape. Mainly due to erosion, extremely folding from plate tectonic movement, or lava/magma flow melting/cutting through rock layers.
