**Inequalities** Radmila Bulajich Manfrino, José Antonio Gómez Ortega, Rogelio Valdez Delgado, 2009-09-18 This book is intended for the Mathematical Olympiad students who wish to prepare for the study of inequalities a topic now of frequent use at various levels of mathematical competitions In this volume we present both classic inequalities and the more useful inequalities for confronting and solving optimization problems An important part of this book deals with geometric inequalities and this fact makes a big difference with respect to most of the books that deal with this topic in the mathematical olympiad The book has been organized in four chapters which have each of them a different character Chapter 1 is dedicated to present basic inequalities Most of them are numerical inequalities generally lacking any geometric meaning However where it is possible to provide a geometric interpretation we include it as we go along We emphasize the importance of some of these inequalities such as the inequality between the arithmetic mean and the geometric mean the Cauchy Schwarz inequality the rearrangement inequality the Jensen inequality the Muirhead theorem among others For all these besides giving the proof we present several examples that show how to use them in mathematical olympiad problems We also emphasize how the substitution strategy is used to deduce several inequalities

*Advanced Olympiad Inequalities: Algebraic & Geometric Olympiad Inequalities* Alijadallah Belabess, 2019-03-14 This book contains a unique collection of new inequalities that were specifically imagined by the author to challenge the boundaries of curiosity and imagination The inequalities are extremely beautiful and sharp and the book covers various topics from 3 and 4 variables inequalities symmetric and non symmetric inequalities to geometric inequalities Many of the exercises are presented with detailed solutions covering a variety of must know old and new techniques in tackling Olympiad problems The book contains also a variety of unsolved exercises which were left to the reader as additional challenges Most importantly the book deals with the daunting topic of asymmetric inequalities where most classical approaches fail The book has been organised in five chapters In the first one we presented a collection of classical algebraic and geometric inequalities such as Cauchy Schwarz Cheybeshev s Newton s Bernoulli s Euler s Walker s inequalities among others These are the classical inequalities that any student should master if he is aiming for a medal at Mathematical Olympiad competitions The second and third chapters deal respectively with 3 and 4 variables inequalities covering both symmetric and asymmetric inequalities The fourth chapter is about Geometric inequalities involving triangle sides medians altitudes internal bisectors areas perimeters orthic triangles angles circumradius inradius The last chapter contains detailed solutions to the proposed problems with more than one solution for some of the inequalities
