

Geometric Analysis: The Diagonal and Center

One of the simplest tools of visual analysis is to locate the diagonals in a composition. The diagonal line is the most dynamic line and it implies direction and movement. The diagonals, from corner to corner of any square or rectangle, meet at the center of the composition and the lines can become organic, natural tools. Classic paintings often use the diagonal and elements that are aligned along the diagonal feel comfortable and peaceful as they pull the viewer's eye along the line.

Diagonal, Street Evening, Albert Bierstadt, 1841

Although rarely noted by the casual viewer, the role of the diagonal is strong in *Street Evening*. The canvas is almost a square and attention is focused on the street, trees, and sky rather than the proportion of the format. The largest object is the foreground bridge and a diagonal runs closely along its left side and through the uppermost corner of the corner of the painting. The opposite diagonal follows the edge of the buildings and passes through the trees.

Geometric Analysis: The Rule of Thirds

In art and design and writers use simple numbers before often used to re-organizational device they imply asymmetry, which often makes a composition more visually interesting. The rule of thirds says parts that what is rectangle or square is divided into thirds vertically and horizontally, the four intersecting points within the composition are the points of optimal focus. The artist or designer uses placement and proximity to determine which of these points is hierarchically the most important.

Rule of Thirds Grid

Placing a 3x3 grid over *Street Evening* reveals additional insights about the structure of the composition. The buildings and their reflection occupy the left column. The foreground is split in half by the rightmost grid line, and the white painted line on the bridge aligns with the lower right intersecting grid point. The reflection of light in the water is just below the lower left point, and the upper two points land in the water and at the base of the bridge. The diagonals pass through the intersecting points.
