**Geostatistics Banff 2004** Oy Leuangthong, Clayton V. Deutsch, 2008-01-24 The return of the congress to North America after 20 years of absence could not have been in a more ideal location The beauty of Banff and the many offerings of the Rocky Mountains was the perfect background for a week of interesting and innovative discussions on the past present and future of geostatistics The congress was well attended with approximately 200 delegates from 19 countries across six continents There was a broad spectrum of students and seasoned geostatisticians who shared their knowledge in many areas of study including mining petroleum and environmental applications You will find 119 papers in this two volume set All papers were presented at the congress and have been peer reviewed They are grouped by the different sessions that were held in Banff and are in the order of presentation These papers provide a permanent record of different theoretical perspectives from the last four years Not all of these ideas will stand the test of time and practice however their originality will endure The practical applications in these proceedings provide nuggets of wisdom to those struggling to apply geostatistics in the best possible way Students and practitioners will be digging through these papers for many years to come Oy Leuangthong Clayton V Deutsch ACKNOWLEDGMENTS We would like to thank the industry sponsors who contributed generously to the overall success and quality of the congress De Beers Canada Earth Decision Sciences Maptek Chile Ltda Mira Geoscience Nexen Inc Petro Canada Placer Dome Inc *Geostatistics Banff 2004* Oy Leuangthong, Clayton V. Discover the practical aspects of modeling techniques and their applicability on both terrestrial and extraterrestrial structures. A wide overlap exists in the methodologies used by geoscientists working on the Earth and those focused on other planetary bodies in the Solar System. Over the course of a series of sessions at the General Assemblies of the European Geosciences Union in Vienna, the intersection found in 3D characterization and modeling of geological and geomorphological structures for all terrestrial bodies in our solar system revealed that there are similar datasets and common techniques for the study of all planets, Earth and beyond, from a geological point of view. By looking at Digital Outcrop Models (DOMs), Digital Elevation Models (DEMs), or Shape Models (SM), researchers may achieve digital representations of outcrops, topographic surfaces, or entire small bodies of the Solar System like asteroids or comet nuclei. 3D Digital Geological Models. From Terrestrial Outcrops to Planetary Surfaces has two central objectives: to highlight the similarities that geological disciplines have in common when applied to entities in the Solar System and to encourage interdisciplinary communication and collaboration between different scientific communities. The book particularly focuses on analytical techniques on DOMs, DEMs, and SMs that allow for quantitative characterization of outcrops and geomorphological features. It also highlights

innovative 3D interpretation and modeling strategies that allow scientists to gain new and more advanced quantitative results on terrestrial and extraterrestrial structures 3D Digital Geological Models From Terrestrial Outcrops to Planetary Surfaces readers will also find The first volume dedicated to this subject matter that successfully integrates methodology and applications A series of methodological chapters that provide instruction on best practices involving DOMs DEMs and SMs A wide range of case studies including small to large scale projects on Earth Mars the 67P Churyumov Gerasimenko comet and the Moon Examples of how data collected at surface can help reconstruct 3D subsurface models 3D Digital Geological Models From Terrestrial Outcrops to Planetary Surfaces is a useful reference for academic researchers in earth science structural geology geophysics petroleum geology remote sensing geostatistics and planetary scientists and graduate students studying in these fields It will also be of interest for professionals from industry particularly those in the mining and hydrocarbon fields
