Adaptive Regression for Modeling Nonlinear Relationships George J. Knafl, Kai Ding, 2016-09-20
 This book presents methods for investigating whether relationships are linear or nonlinear and for adaptively fitting appropriate models when they are nonlinear
 Data analysts will learn how to incorporate nonlinearity in one or more predictor variables into regression models for different types of outcome variables
 Such nonlinear dependence is often not considered in applied research yet nonlinear relationships are common and so need to be addressed
 A standard linear analysis can produce misleading conclusions while a nonlinear analysis can provide novel insights into data not otherwise possible
 A variety of examples of the benefits of modeling nonlinear relationships are presented throughout the book
 Methods are covered using what are called fractional polynomials based on real valued power transformations of primary predictor variables combined with model selection based on likelihood cross validation
 The book covers how to formulate and conduct such adaptive fractional polynomial modeling in the standard logistic and Poisson regression contexts with continuous discrete and counts outcomes respectively either univariate or multivariate
 The book also provides a comparison of adaptive modeling to generalized additive modeling GAM and multiple adaptive regression splines MARS for univariate outcomes
 The authors have created customized SAS macros for use in conducting adaptive regression modeling
 These macros and code for conducting the analyses discussed in the book are available through the first author's website and online via the book's Springer website
 Detailed descriptions of how to use these macros and interpret their output appear throughout the book
 These methods can be implemented using other programs

SAS for Forecasting Time Series John C. Brocklebank, David A. Dickey, 2003-07-14
 Easy to read and comprehensive this book shows how the SAS System performs multivariate time series analysis and features the advanced SAS procedures STATSPACE ARIMA and SPECTRA
 The interrelationship of SAS ETS procedures is demonstrated with an accompanying discussion of how the choice of a procedure depends on the data to be analysed and the results desired
 Other topics covered include detecting sinusoidal components in time series models and performing bivariate correlation spectral analysis and comparing the results with the standard transfer function methodology
 The authors' unique approach to integrating students in a variety of disciplines and industries
 Emphasis is on correct interpretation of output to draw meaningful conclusions
 The volume co-published by SAS and JWS features both theory and practicality and accompanies a soon to be extensive library of SAS hands-on manuals in a multitude of statistical areas
 The book can be used with a number of hardware specific computing machines including CMS Mac MVS Open VMS Alpha Open VMS VAX OS 390 OS 2 UNIX and Windows
