Evidence suggests a direct correlation between the quality of postoperative orthopaedic rehabilitation and the effectiveness of the surgery. Clinical Orthopaedic Rehabilitation 4th Edition helps today's orthopaedic teams apply the most effective evidence-based protocols for maximizing return to function following common sports injuries and post-surgical conditions. Every section is written by a combination of surgeons, physical therapists, and occupational therapists, making this respected text a truly practical how-to guide for the appropriate initial exam, differential diagnosis, treatment, and rehabilitation. Treatment and rehabilitation protocols are presented in a step-by-step algorithmic format, with each new phase begun after criteria are met, criteria-based progression reflecting current best practice. Revised content brings you up to date with new evidence-based literature on examination techniques, classification systems, differential diagnosis, treatment options, and criteria-based rehabilitation protocols. Extensive updates throughout include new chapters on medial patellofemoral ligament, shoulder impingement, pec major ruptures, thoracic outlet syndrome, general humeral fractures, foot and ankle fractures, medial patellofemoral ligament reconstruction, the arthritic hip, athletic pubalgia, and labral repair and reconstruction.
