Post-lab observation questions measure your understanding of lab results and the key term quiz helps to build your vocabulary.

Computer-Aided Design in Power Engineering Zlatan Stojkovic, 2012-11-06. This textbook demonstrates the application of software tools in solving a series of problems from the field of designing power system structures and systems. It contains four chapters. The first chapter leads the reader through all the phases necessary in the procedures of computer-aided modeling and simulation. It guides through the complex problems presenting on the basis of eleven original examples. The second chapter presents application of software tools in power system calculations of power systems equipment design. Several design example calculations are carried out using engineering standards like MATLAB, EMTD, ATP, Excel, Access, AutoCAD and Simulink. The third chapter focuses on the graphical documentation using a collection of software tools: AutoCAD, EPLAN, SIMARIS, SIVACON, SIMARIS DESIGN, which

enable the complete automation of the development of graphical documentation of a power systems In the fourth chapter the application of software tools in the project management in power systems is discussed Here the emphasis is put on the standard software MS Excel and MS Project

The Status of Marine Fisheries in East Asia Daniel Pauly,Cui Liang,Weiwei Xian,2022-05-24 The fisheries of China generate the largest catch in the world However these fisheries are in generally bad shape notably due to lack of management systems based on rigorous studies on the dynamics of major stocks exploited by the fisheries of China and neighboring countries This could be mitigated at least in part by the systematic application of newly developed methods for evaluating the status of exploited fish stocks for use in data sparse situations focusing on methods for estimating maximum sustainable yield MSY from catch informed by a combination of biological knowledge on the species intrinsic rate of population increase r and carrying capacity k and what is known about the stock for instance relative abundance indicators e g catch per unit of effort The aim of this Research Topic is to create an outlet for the studies that will result from the application of these modern methods to exploited stocks of East Asian marine fish encouraging the rigorous evaluation of these stocks and providing a basis for their rebuilding as required especially for Chinese stocks This would lead to the creation of a cadre of fishery scientists knowledgeable in using the methods in question and interested in collaborating with colleagues in other regions with similar issues Focusing on East Asia will reinforce to readers in the West that these fisheries are not a sideshow to the more interesting fisheries in Europe or North America but a major source of seafood for people in East Asia Indeed the failure of these domestic fisheries would increase the impacts of distant water fisheries from East Asia in other parts of the world
