Science Of Learning Mathematical Proofs, The: An Introductory Course Elana Reiser,2020-11-25 College students struggle with the switch from thinking of mathematics as a calculation based subject to a problem solving based subject This book describes how the introduction to proofs course can be taught in a way that gently introduces students to this new way of thinking This introduction utilizes recent research in neuroscience regarding how the brain learns best Rather than jumping right into proofs students are first taught how to change their mindset about learning how to persevere through difficult problems how to work successfully in a group and how to reflect on their learning With these tools in place students then learn logic and problem solving as a further foundation Next various proof techniques such as direct proofs proof by contraposition proof by contradiction and mathematical induction are introduced These proof techniques are introduced using the context of number theory The last chapter uses Calculus as a way for students to apply the proof techniques they have learned

The Teaching and Learning of Mathematics at University Level Derek Holton, 2006-04-11. This book is the final report of the ICMI study on the Teaching and Learning of Mathematics at University Level. As such, it is one of a number of such studies that ICMI has commissioned. The other Study Volumes cover assessment in mathematics education, gender equity research in mathematics education, the teaching of geometry and history in mathematics education. All of these Study Volumes represent a statement of the state of the art in their respective areas. We hope that this is also the case for the current Study Volume. The current study on university-level mathematics was commissioned for essentially four reasons. First, universities world-wide are accepting a much larger and more diverse group of students than has been the case. Consequently, universities have begun to adopt a role more like that of the school system and less like the elite institutions of the past. As a result, the educational and pedagogical issues facing universities have changed. Second, although university student numbers have increased significantly, there has not been a corresponding increase in the number of mathematics majors. Hence, mathematics departments have to be more aware of their students' needs in order to retain the students they have and to attract future students. As part of this awareness, departments of mathematics have to take the teaching and learning of mathematics more seriously than perhaps they have in the past.
