Threshold Concepts in Practice Ray Land,Jan H. F. Meyer,Michael T. Flanagan,2016-07-09 Threshold Concepts in Practice brings together fifty researchers from sixteen countries and a wide variety of disciplines to analyse their teaching practice and the learning experiences of their students through the lens of the Threshold Concepts Framework In any discipline there are certain concepts the jewels in the curriculum whose acquisition is akin to passing through a portal Learners enter new conceptual and often affective territory Previously inaccessible ways of thinking or practising come into view without which they cannot progress and which offer a transformed internal view of subject landscape or even world view These conceptual gateways are integrative exposing the previously hidden interrelatedness of ideas and are irreversible However they frequently present troublesome knowledge and are often points at which students become stuck Difficulty in understanding may leave the learner in a liminal state of transition a betwixt and between space of knowing and not knowing where understanding can approximate to a form of mimicry Learners navigating such spaces report a sense of uncertainty ambiguity paradox anxiety even chaos The liminal space may equally be one of awe and wonderment Thresholds research identifies these spaces as key transformational points crucial to the learner s development but where they can oscillate and remain for considerable periods These spaces require not only conceptual but ontological and discursive shifts This volume the fourth in a tetralogy on Threshold Concepts discusses student experiences and the curriculum interventions of their teachers in a range of disciplines and professional practices including medicine law engineering architecture and military education Cover image Detail from Eve offering the apple to Adam in the Garden of Eden and the serpent c 1520 25 Lucas Cranach the Elder 1472 1553 Bridgeman Images All rights reserved *Research and Innovation in Physics Education: Two Sides of the Same Coin* Jenaro Guisasola,Kristina Zuza,2020-08-20 This book describes novel approaches designed to enhance the professional training of physics teachers and explores innovations in the teaching and learning of physics in the

classroom and laboratory It features selected contributions from the International Research Group on Physics Teaching GIREP and Multimedia in Physics Teaching and Learning MPTL Conference held in Donostia San Sebastian Spain in July 2018 which brought together two communities researchers in physics education and physics teachers The book covers a broad range of topics highlighting important aspects of the relationship between research and innovation in the teaching of physics and presenting fresh insights to help improve learning processes and instruction Offering a contemporary vision of physics teaching and the learning process the book is of interest to all teachers and researchers committed to teaching and learning physics on the basis of good evidence

Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity

year **Academic Belonging in Higher Education** Eréndira Rueda, Candice Lowe Swift, 2023-12-13 The concept of belonging has been increasingly understood as the missing piece in diversity equity and inclusion efforts in higher education This book explores the need to recognize and account for institutional level factors that shape academic belonging thereby improving student experience and outcomes Though recent scholarship has identified several factors that are associated with student belonging in academics there is little research that addresses what faculty can do in concrete terms to promote belonging particularly in the domains where they have the most influence The 12 chapters in this volume introduce readers to an array of collaborative cutting edge efforts to develop pedagogies programs strategies and environments that help students develop academic belonging that is a sense of connection competence and confidence in academic domains This book is written for higher education faculty administrators and researchers who wish to enhance their students sense of academic belonging by taking informed practical measures to make them feel valued and supported Handbook of Research on Blended Learning Pedagogies and Professional Development in Higher Education Keengwe, Jared, 2018-07-20 Online and blended courses are becoming increasingly prevalent in higher education settings and the pressures to incorporate these environments highlights the increased demand to serve a generation that prefers learning through experience or through interacting with learning tools Challenges arise in assisting instructors in facilitating and designing blended learning environments that will provide effective learning for all students The Handbook of Research on Blended Learning Pedagogies and Professional Development in Higher Education is a critical research publication that delves into the importance of effective professional development for educators planning and teaching online or blended courses It also establishes the benefits of technology mediated learning environments over traditional learning methods Highlighting a wide array of topics such as online learning environments active learning model and educational development this publication explores technology based teaching methods in higher education This book is targeted toward educators educational administrators academicians researchers and professionals within the realm of higher education **Talking about Leaving Revisited** Elaine Seymour, Anne-Barrie Hunter, 2019-12-10 Talking about Leaving Revisited discusses findings from a five year study that explores the extent nature and contributory causes of field switching both from and among STEM majors and what enables persistence to graduation The book reflects on what has and has not changed since publication of Talking about Leaving Why Undergraduates Leave the Sciences Elaine Seymour Nancy M Hewitt Westview Press 1997 With the editors guidance the authors of each chapter collaborate to address key questions drawing on findings from each related study source national and institutional data interviews with faculty and students structured observations and student assessments of teaching methods in STEM gateway courses Pitched to a wide audience engaging in style and richly illustrated in the interviewees own words this book affords the most comprehensive explanatory account to date of persistence relocation and loss in undergraduate sciences Comprehensively addresses the causes of loss from undergraduate STEM majors an issue of

ongoing national concern Presents critical research relevant for nationwide STEM education reform efforts Explores the reasons why talented undergraduates abandon STEM majors Dispels popular causal myths about why students choose to leave STEM majors This volume is based upon work supported by the Alfred P Sloan Foundation Award No 2012 6 05 and the National Science Foundation Award No DUE 1224637 **Differential Calculus for Beginners** Alfred Lodge,1905

Toward Equity and Social Justice in Mathematics Education Tonya Gau Bartell,2018-08-14 This critical volume responds to the enduring challenge in mathematics education of addressing the needs of marginalized students in school mathematics and stems from the 2015 Annual Meeting of the North American Group of the Psychology of Mathematics Education PME NA This timely analysis brings greater clarity and support to such challenges by narrowing in on four foci theoretical and political perspectives toward equity and justice in mathematics education identifying and connecting to family and community funds of knowledge student learning and engagement in preK 12 mathematics classrooms and supporting teachers in addressing the needs of marginalized learners Each of these areas examines how race class culture power justice and mathematics teaching and learning intersect in mathematics education to sustain or disrupt inequities and include contributions from scholars writing about mathematics education in diverse contexts Included in the coverage Disrupting policies and reforms to address the needs of marginalized learners A socio spatial framework for urban mathematics education Linking literature on allywork to the work of mathematics teacher educators Transnational families mathematical funds of knowledge Multilingual and technological contexts for supporting learners mathematical discourse Preservice teachers strategies for teaching mathematics with English learners Toward Equity and Social Justice in Mathematics Education is of significant interest to mathematics teacher educators and mathematics education researchers currently addressing the needs of marginalized students in school mathematics It is also relevant to teachers of related disciplines administrators and instructional designers interested in pushing our thinking and work toward equity and justice in mathematics education *Handbook of Research on Active Learning and the Flipped Classroom Model in the Digital Age* Keengwe, Jared,2015-11-12 The notion of a flipped classroom draws on such concepts as active learning student engagement hybrid course design and course podcasting The value of a flipped class is in the repurposing of class time into a workshop where students can inquire about lecture content test their skills in applying knowledge and interact with one another in hands on activities The Handbook of Research on Active Learning and the Flipped Classroom Model in the Digital Age highlights current research on the latest trends in education with an emphasis on the technologies being used to meet learning objectives Focusing on teaching strategies learner engagement student interaction and digital tools for learning this handbook of research is an essential resource for current and future educators instructional designers IT specialists school administrators and researchers in the field of education *Undergraduate Mathematics for the Life Sciences* Glenn Ledder,Jenna P. Carpenter,Timothy D. Comar,2013 There is a gap between the extensive mathematics background that is

beneficial to biologists and the minimal mathematics background biology students acquire in their courses The result is an undergraduate education in biology with very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students The problems are sorted into three themes Models Processes and Directions It is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see
