CAD/CAM P.C.C. Wang, 2012-12-06 To understand what we know and be aware of what is to be known has become the central focus in the treatment of CAD CAM issues It has been some time since we began treating issues arriving from engineering data handling in a low key fashion because of its housekeeping chores and data maintenance aspects representing nonglamorous issues related to automation Since the advent of CAD CAM large numbers of data bases have

been generated through standalone CAD systems And the rate of this automated means of generating data is rapidly increasing this is possibly the key factor in changing our way of looking at engineering data related problems As one deeply involved with engineering data handling and CAD CAM applications I know that to succeed we must do our homework tracking the trends keeping abreast of new technologies new applications new companies and products that are exploding on the scene every day In today s fast paced information handling era just keeping up is a full time job That is why ATI has initiated these publications in order to bring to the users some of the information regarding their experiences in the important fields of CAD CAM and engineering data handling This volume contains some of the paper including revisions which were presented at the Fifth Automation Technology Conference held in Monterey California A series of publications has been initiated through cooperation between ATI and the Kluwer Academic Publishers The first volume was *Advances in Engineering Data Handling Case Studies* P.C.C. Wang,1986-04-30 To understand what we know and be aware of what is to be known is a necessary approach to treating CAD CAM issues The challenge for all of us interested in CAD CAM and engineering data handling is to under stand what we know and what we need to know about today s and tomorrow s technology to track the explosive development of our field and its broadening range of applications to sort through the details which compete for our attention and to perceive underlying trends A key development in the past year was the rapid and widespread acceptance by all user segments of personal computer based CAD CAM workstations coupled with widespread use of software packages both those developed for PC based workstations and others converted from main frame and mini systems for use on PC based or 32 bit workstations If this trend continues for a few more years as much as 900 0 of all design work may be accomplished on advanced versions of PC based workstations Many software systems vendors unknown until recently to the PC based CAD CAM community have now come to dominate the market companies such as Autodesk Chessell Robocom Future Net T W Systems P CAD Cascade 4 D Graphics CADAM Wang Hornbuckle and more than 20 other companies who sell PC based CAD CAM software

demonstrated in many a real life situation Hence currently great efforts are being devoted to research and development of general as well special methodologies of and tools for automation This volume reports on some of these methodologies and tools In general terms methodologies for automation can be divided into two groups There are situations where a process whether open loop or closed loop is fairly clearly understood In such a situation it is possible to create a mathematical model and to prescribe a mathematical procedure to optimize the output If such mathematical models and procedures are computationally tractable we call the corresponding automation algorithmic or parametric programming There is however a second set of situations which include processes that are not well understood and the available mathematical models are only approximate and discrete While there are others for which mathematical procedures are so complex and disjoint that they are computationally intractable These are the situations for which heuristics are quite suitable for automation We choose to call such automation knowledge based automation or heuristic programming
