

## Encounter Conformal Equivalence Checker

Formal verification technology for fast and accurate bug detection and correction

Cadence® Encounter® Conformal® Equivalence Checker (EC) makes it possible to verify and debug multi-million-gate designs without using test vectors. It offers the industry's only complete equivalence checking solution for verifying SoC designs—from RTL to final LVS-netlist (SPICE)—as well as FPGA designs. Encounter Conformal EC enables designers to verify the widest variety of circuits, including complex arithmetic logic, datapaths, memories, and custom logic.

### Encounter Conformal EC

Already proven in thousands of tapeouts, Encounter Conformal EC is the industry's most widely supported independent equivalence checking product. It is production-proven on more physical design closure products, advanced synthesis software, ASIC libraries, and IP cores than any other formal verification technology.

Encounter Conformal EC is available in three configurations: the L offering delivers gate equivalence checking technology; the XL offering extends the L capabilities with automated checking of complex datapaths; and equivalence checking at the final place-and-route netlist; the QOL offering extends the L and XL capabilities with transistor circuit analysis for custom designs and embedded memories.

Engineers can use the QOL offering with custom embedded memories, arithmetic blocks, datapaths, mixed and extended libraries, and all other custom and semi-custom digital circuit functions. Circuit styles supported include standard and complex Boolean functions, latches and registers, pass-gates, transmission-gates, tri-state switch logic, pre-charged logic cells, domino logic blocks, and dual-rail.

Figure 1. Encounter Conformal EC offers a complete solution, from RTL to final layout, to affine convergent-once design goals.
