

BPH 3010 Concepts in Epidemiology

Study Guide

Winter 2021

1. Define "epidemiology."

Epidemiology is the study of distribution and determinants of health and disease, morbidity, injuries, disabilities, and mortality in populations. The study focuses on controlling health issues in populations and causality.

Example: food poisoning at restaurants when chipotle had an outbreak or when foods are recalled. Tracing down how many people are affected and where it began. Or studying if vaping causes lung cancer for teens later in their life.

2. What the difference between morbidity and mortality?

Morbidity: illnesses caused by a specific disease or health condition

Mortality: the number of deaths (could look at deaths for various cases pertaining to one issue, for example how many people die from lung cancer)

3. What is the difference between description and analysis in epidemiology?

Descriptive epidemiology looks at the 5 W's (what, who, where, when, and why/how), based off person, place, and time. It focuses on characterizing the amount of distribution of health and disease within populations.

What: health issue of concern

Who: person/population affected or at risk

Where: place

When: time

Why/how: cause, risk factors, and modes of transmission

Analysis epidemiology focuses more on analyzing data and is part of the scientific method. Concerned for with cause and effect or why + how. Epidemiologists use
