There are a number of best practices you need to consider to build highly effective J2EE components and integrate them into applications. These practices include evaluating and selecting the right set of software components and services to handle the job. In this book, Darren Broemmer supplies you with a set of best practices for J2EE development and then teaches you how to use them to construct an application architecture referred to as the reference architecture. The design and implementation of the reference architecture is based on a set of guiding principles that are used to optimize and automate J2EE development. In addition to the author's thorough discussions of the latest technologies for J2EE implementation including EJB 2, Jakarta Struts, Servlets, Java Server Pages, UML design patterns, Common Business Logic Foundation components, and XML, Broemmer addresses such topics as Understanding J2EE application architecture, Building business applications with J2EE, a business object architecture and extensible components created with design patterns, Designing and implementing a sample banking Web application, Integrating proven performance engineering and optimization practices in the development process, Using metadata driven configurable foundation components to automate much of the development and processing of Web based business applications. The companion Web site contains the source code for a Common Business Logic Foundation and sample applications from the book including a Jakarta Struts project and a banking application. *Is American Science in Decline?* Yu Xie,Alexandra A Killewald,2012-06-11 Alarmists argue that the United States urgently needs more and better trained scientists to compete with the rest of the world Their critics counter that far from facing a shortage we are producing a glut of young scientists with poor employment prospects Both camps have issued reports in recent years that predict the looming decline of American science Drawing on their extensive analysis of national datasets Yu Xie and Alexandra Killewald have welcome news to share American science is in good health *Is American Science in Decline* does reveal areas of concern namely scientists low earnings the increasing competition they face from Asia and the declining number of doctorates who secure academic positions But the authors argue that the values inherent in American culture make the country highly conducive to science for the foreseeable future They do not see globalization as a threat but rather a potential benefit since it promotes efficiency in science through knowledge sharing In an age when other countries are catching up American science will inevitably become less dominant even though it is not in decline relative to its own past As technology continues to change the American economy better educated workers with a range of skills will be in demand So as a matter of policy the authors urge that science education not be detached from general education
