Foundations of Mathematical Analysis Richard Johnsonbaugh, W. E. Pfaffengerger, 2010-01-01 This definitive look at modern analysis includes applications to statistics numerical analysis Fourier series differential equations mathematical analysis and functional analysis The self contained treatment contains clear explanations and all the appropriate theorems and proofs A selection of more than 750 exercises includes some hints and solutions 1981 edition Fundamentals of Real Analysis James Foran, 1991-01-07 Guides students from simple aspects of set theory to more complex structures Based on a two semester course in real analysis this textbook explains fundamentals of the theory of functions of a real variable including subsets of the line the theory of measure the Lebesgue integral and its relati **Hyperspaces** Alejandro Illanes, 2024-12-15 Presents hyperspace fundamentals offering a basic overview and a foundation for further study Topics include the topology for hyperspaces examples of geometric models for hyperspaces 2^X and $C(X)$ for Peano continua X arcs in hyperspaces the shape and contractability of hyperspaces hyperspaces and the fixed point property and Whitney maps The text contains examples and exercises throughout and provides proofs for most results Subplane Covered Nets Norman L. Johnson, 2000-01-03 This work confronts the question of geometric processes of derivation specifically the derivation of affine planes keying in on construction techniques and types of transformations in which lines of a newly created plane can be understood as subplanes of the original plane The book provides a theory of subplane covered nets without restriction to the finite case or imposing commutativity conditions Global Lorentzian Geometry John K. Beem, 2017-09-29 Bridging the gap between modern differential geometry and the mathematical physics of general relativity this text in its second edition includes new and expanded material on topics such as the instability of both geodesic completeness and geodesic incompleteness for general space times geodesic connectibility the generic condition the sectional curvature function in a neighbourhood of degenerate two plane and proof of the Lorentzian Splitting Theorem Five or more copies may be ordered by college or university stores at a special student price available on request Ideal Systems Franz Halter-Koch, 1998-04-21 Provides for the first time a concise introduction to general and multiplicative ideal theory valid for commutative rings and monoids and presented in the language of ideal systems on commutative monoids Stability by Liapunov's Matrix Function Method with Applications A.A. Martynyuk, 1998-08-03 Provides a systematic study of matrix Liapunov functions incorporating new techniques for the qualitative analysis of nonlinear systems encountered in a wide variety of real world situations **Degenerate Differential Equations in Banach Spaces** Angelo Favini, Atsushi Yagi, 1998-09-10 This work presents a detailed study of linear abstract degenerate differential equations using both the semigroups generated by multivalued linear operators and extensions of the operational method from Da Prato and Grisvard The authors describe the recent and original results on PDEs and algebraic differential equations and establishes the analyzability of the semigroup generated by some degenerate parabolic operators in spaces of continuous functions

Prufer Domains Marco Fontana, James Huckaba, Ira Papick, 1996-09-04 Provides a picture of the research that has occurred and the techniques that have been involved in studying Prufer domains since about 1970 The text covers generating ideals in Prufer domains particular overrings of Prufer domains applications of the theory of overrings generalized dedekind domains polynomial extensions and quasi Prufer domains and more Multivalued Linear Operators Ronald Cross, 1998-07-09 Constructs a theoretical framework for the study of linear relations and provides underlying concepts rules formulae theorems and techniques The book compares the inversion adjoints completion and closure of various classes of linear operators It highlights compact and precompact relations Fundamentals of Domination in Graphs Teresa W. Haynes, Stephen Hedetniemi, Peter Slater, 2013-12-16 Provides the first comprehensive treatment of theoretical algorithmic and application aspects of domination in graphs discussing fundamental results and major research accomplishments in an easy to understand style Includes chapters on domination algorithms and NP completeness as well as frameworks for domination Introduction to Fourier Series Rupert Lasser, 2020-08-12 This work addresses all of the major topics in Fourier series emphasizing the concept of approximate identities and presenting applications particularly in time series analysis It stresses throughout the idea of homogenous Banach spaces and provides recent results Techniques from functional analysis and measure theory are utilized College and university bookstores may order five or more copies at a special student price available on request from Marcel Dekker Inc **Vector and Tensor Analysis** Eutiquio C. Young, 2017-12-19 Revised and updated throughout this book presents the fundamental concepts of vector and tensor analysis with their corresponding physical and geometric applications emphasizing the development of computational skills and basic procedures and exploring highly complex and technical topics in simplified settings This text incorporates transformation of rectangular cartesian coordinate systems and the invariance of the gradient divergence and the curl into the discussion of tensors combines the test for independence of path and the path independence sections offers new examples and figures that demonstrate computational methods as well as clarify concepts introduces subtitles in each section to highlight the appearance of new topics provides definitions and theorems in boldface type for easy identification It also contains numerical exercises of varying levels of difficulty and many problems solved **The Kurzweil-Henstock Integral and Its Differential** Solomon Leader, 2001-06-29 A comprehensive review of the Kurzweil Henstock integration process on the real line and in higher dimensions It seeks to provide a unified theory of integration that highlights Riemann Stieljes and Lebesgue integrals as well as integrals of elementary calculus The author presents practical applications of the definitions and theorems in each sec Cogalois Theory Toma Albu, 2002-10-16 This volume offers a systematic comprehensive investigation of field extensions finite or not that possess a Cogalois correspondence The subject is somewhat dual to the very classical Galois Theory dealing with field extensions possessing a Galois correspondence Solidly backed by over 250 exercises and an extensive bibliography this book presents a compact and complete review of basic field theory considers the
