Advances in Mechanics of Time-Dependent Materials Holm Altenbach, Julius Kaplunov, Hongbing Lu, Masayuki Nakada, 2023-03-09 This book presents current trends in Mechanics of Time Dependent Materials It covers a number of cutting edge themes such as characterization of linear and nonlinear mechanical behavior of viscoelastic materials and their composites taking into consideration large deformations low moderate and large strain rates as well as failure and fracture phenomena The contributions are inspired by advanced applications in modern technologies such as injection molding and extrusion

Progress in Continuum Mechanics Holm Altenbach, Hans Irschik, Alexey V. Porubov, 2023-10-04 This book gives an insight into the current developments in the field of continuum mechanics Twenty five researchers present new theoretical concepts e.g. better inclusion of the microstructure in the models describing material behavior At the same time there are also more applications for the theories in engineering practice In addition to new theoretical approaches in continuum mechanics and applications the book puts an emphasis on discussing multi physics problems

Mathematical Modeling in Mechanics of Granular Materials Oxana Sadovskaya, Vladimir Sadovskii, 2012-06-08 This monograph contains original results in the field of mathematical and numerical modeling of mechanical behavior of granular materials and materials with different strengths It proposes new models helping to define zones of the strain localization The book shows how to analyze processes of the propagation of elastic and elastic plastic waves in loosened materials and constructs models of mixed type describing the flow of granular materials in the presence of quasi static deformation zones In a last part the book studies a

numerical realization of the models on multiprocessor computer systems The book is intended for scientific researchers lecturers of universities post graduates and senior students who specialize in the field of the deformable materials mechanics mathematical modeling and adjacent fields of applied and calculus mathematics Shell Structures: Theory and Applications Volume 4 Wojciech Pietraszkiewicz, Wojciech Witkowski, 2017-10-30 Shells are basic structural elements of modern technology and everyday life Examples of shell structures in technology include automobile bodies water and oil tanks pipelines silos wind turbine towers and nanotubes Nature is full of living shells such as leaves of trees blooming flowers seashells cell membranes or wings of insects In the human body arteries the eye shell the diaphragm the skin and the pericardium are all shells as well Shell Structures Theory and Applications Volume 4 contains 132 contributions presented at the 11th Conference on Shell Structures Theory and Applications Gdansk Poland 11-13 October 2017 The papers reflect a wide spectrum of scientific and engineering problems from theoretical modelling through strength stability and dynamic behaviour numerical analyses biomechanic applications up to engineering design of shell structures Shell Structures Theory and Applications Volume 4 will be of interest to academics researchers designers and engineers dealing with modelling and analyses of shell structures It may also provide supplementary reading to graduate students in Civil Mechanical Naval and Aerospace Engineering *Failure and Damage Analysis of Advanced Materials* Holm Altenbach, Tomasz Sadowski, 2014-12-01 The papers in this volume present basic concepts and new developments in failure and damage analysis with focus on advanced materials such as composites laminates sandwiches and foams and also new metallic materials Starting from some mathematical foundations limit surfaces symmetry considerations invariants new experimental results and their analysis are shown Finally new concepts for failure prediction and analysis will be introduced and discussed as well as new methods of failure and damage prediction for advanced metallic and non metallic materials Based on experimental results the traditional methods will be revised **Numerical Mathematics and Advanced Applications - ENUMATH 2013** Assyr Abdulle, Simone Deparis, Daniel Kressner, Fabio Nobile, Marco Picasso, 2014-11-25 This book gathers a selection of invited and contributed lectures from the European Conference on Numerical Mathematics and Advanced Applications ENUMATH held in Lausanne Switzerland August 26-30 2013 It provides an overview of recent developments in numerical analysis computational mathematics and applications from leading experts in the field New results on finite element methods multiscale methods numerical linear algebra and discretization techniques for fluid mechanics and optics are presented As such the book offers a valuable resource for a wide range of readers looking for a state of the art overview of advanced techniques algorithms and results in numerical mathematics and scientific computing **Advanced Theories for Deformation, Damage and Failure in Materials** Holm Altenbach, Artur Ganczarski, 2022-08-31 The book introduces advanced theories for deformation damage and failure in materials The overall continuum mechanical framework was marked out and added by creep and damage mechanics of materials at elevated temperatures The time dependent and time

independent models of cyclic plasticity for low cycle and thermomechanical fatigue life assessment were specified in a very special manner instead of three dimensional statements only one dimensional rheological models were discussed Anisotropic plasticity during non proportional loading and anisotropy of yield failure criteria is more and more important in modern applications It is showing how the limit states of materials can be estimated In addition the damage and failure of composite materials demonstrate the possibility to extend continuum mechanics to continuum damage mechanics of composite materials
