Aho, 2016-03-09 Full of biological applications exercises and interactive graphical examples this text presents comprehensive coverage of both modern analytical methods and statistical foundations The author harnesses the inherent properties of the R environment to enable students to examine the code of complicated procedures step by step and thus better understand the process of obtaining analysis results The graphical capabilities of R are used to provide interactive demonstrations of simple to complex statistical concepts R code and other materials are available online

Introductory Fisheries Analyses with R Derek H. Ogle, 2016-01-05 A How To Guide for Conducting Common Fisheries Related Analyses in R Introductory Fisheries Analyses with R provides detailed instructions on performing basic fisheries stock assessment analyses in the R environment Accessible to practicing fisheries scientists as well as advanced undergraduate and graduate students the book demonstrates the flexibility and power of R offers insight into the reproducibility of script based analyses and shows how the use of R leads to more efficient and productive work in fisheries science The first three chapters present a minimal introduction to the R environment that builds a foundation for the fisheries specific analyses in the remainder of the book These chapters help you become familiar with R for basic fisheries analyses and graphics Subsequent chapters focus on methods to analyze age comparisons age length keys size structure weight length relationships condition abundance from capture recapture and depletion data mortality rates individual growth and the stock recruit relationship The fundamental statistical methods of linear regression analysis of variance ANOVA and nonlinear regression are demonstrated within the contexts of these common fisheries analyses For each analysis the author completely explains the R functions and provides sufficient background information so that you can confidently implement each method Web Resource The author's website at <http://derekogle.com> IFAR includes the data files and R code for each chapter enabling you to reproduce the results in the book as well as create your own scripts The site also offers supplemental code for more advanced analyses and practice exercises for every chapter

Statistical Modeling With R Pablo Inchausti, 2023-01-16 To date statistics has tended to be neatly divided into two theoretical approaches or frameworks frequentist or classical and Bayesian Scientists typically choose the statistical framework to analyse their data depending on the nature and complexity of the problem and based on their personal views and prior training on probability and uncertainty Although textbooks and courses should reflect and anticipate this dual reality they rarely do so This accessible textbook explains discusses and applies both the frequentist and Bayesian theoretical frameworks to fit the different types of statistical models that allow an analysis of the types of data most commonly gathered by life scientists It presents the material in an informal approachable and progressive manner suitable for readers with only a basic knowledge of calculus and statistics Statistical Modeling with R is aimed at senior undergraduate and graduate students professional researchers and practitioners throughout the life sciences seeking to strengthen their understanding of quantitative methods

and to apply them successfully to real world scenarios whether in the fields of ecology evolution environmental studies or computational biology

Ome-wide Studies of Grapevine Fruit Composition and Responses to Agro-environmental Factors in the Era of Systems Biology José Tomás Matus, Simone Diego Castellarin, Giovanni Battista Tornielli, 2019-12-06

Fruits play a substantial role in the human diet as a source of vitamins minerals dietary fiber and a wide range of molecules relevant to health promotion and disease prevention The characterization of genes involved in the accumulation of these molecules during fruit development and ripening and in the overall plant s response to the environment constitutes a fundamental step for improving yield and quality related traits and for predicting this crop s behavior in the field This is certainly the case for grapevine *Vitis vinifera* L one of the most largely cultivated fruit crops in the world The cultivation of this species is facing challenging scenarios driven by climate change including increases in atmospheric carbon dioxide CO₂ solar radiation and earth surface temperature and decreases of water and nutrient availability All these events will potentially affect the grapevine phenology physiology and metabolism in many growing regions and ultimately affect the quality of their fruits and of the most important derived product the wine The sequencing of the grapevine genome has given rise to a new era characterized by the generation of large scale data that requires complex computational analyses Numerous transcriptomic and metabolomic studies have been performed in the past fifteen years providing insights into the gene circuits that control the accumulation of all sorts of metabolites in grapevines From now on the integration of two or more omics will allow depicting gene transcript metabolite networks from a more holistic i e systems perspective This eBook attempts to support this new direction by gathering innovative studies that assess the impact of genotypes the environment and agronomical practices on fruits at the ome scale The works hereby collected are part of a Research Topic covering the use of omics driven strategies to understand how environmental factors and agronomical practices including microclimate modification e g sunlight incidence or temperature water availability and irrigation and postharvest management affect fruit development and composition These studies report well settled transcriptomic and metabolomic methods in addition to newly developed techniques addressing proteome profiles genome methylation landscapes and ionomic signatures some of which attempt to tackle the influence of terroir i e the synergic effect of micro climate soil composition grape genotype and vineyard practices A few reviews and opinions are included that focus on the advantages of applying network theory in grapevine research Studies on vegetative organs in their relation to fruit development and on fruit derived cell cultures are also considered
