continued relevance to current research This combination of classic papers and fresh commentaries makes Foundations of Ecology both a convenient reference to papers often cited today and an essential guide to the intellectual and conceptual roots of the field Published with the Ecological Society of America Foundations of Paleoecology S. Kathleen Lyons, Anna K. Behrensmeyer, Peter J. Wagner, 2019-12-13 Approximately 99% of all life that has ever existed is extinct Fortunately these long dead species have left traces of their lives and interactions with other species in the rock record that paleoecologists use to understand how species and ecosystems have changed over time This record of past life allows us to study the dynamic nature of the Earth and gives context to current and future ecological challenges This book brings together forty four classic papers published between 1924 and 1999 that trace the origins and development of paleoecology The articles cross taxonomic groups habitat types geographic areas and time and have made substantial contributions to our knowledge of the evolution of life Encompassing the full breadth of paleoecology the book is divided into six parts community and ecosystem dynamics community reconstruction diversity dynamics paleoenvironmental reconstruction species interaction and taphonomy Each paper is also introduced by a contemporary expert who gives context and explains its importance to ongoing paleoecological research A comprehensive introduction to the field Foundations of Paleoecology will be an essential reference for new students and established paleoecologists alike Ecological Models and Data in R Benjamin M. Bolker, 2008-07-01 Ecological Models and Data in R is the first truly practical introduction to modern statistical methods for ecology In step by step detail the book teaches ecology graduate students and researchers everything they need to know in order to use maximum likelihood information theoretic and Bayesian techniques to analyze their own data using the programming language R Drawing on extensive experience teaching these techniques to graduate students in ecology Benjamin Bolker shows how to choose among and construct statistical models for data estimate their parameters and confidence limits and interpret the results The book also covers statistical frameworks the philosophy of statistical modeling and critical mathematical functions and probability distributions It requires no programming background only basic calculus and statistics Practical beginner friendly introduction to modern statistical techniques for ecology using the programming language R Step by step instructions for fitting models to messy real world data Balanced view of different statistical approaches Wide coverage of techniques from simple distribution fitting to complex state space modeling Techniques for data manipulation and graphical display Companion Web site with data and R code for all examples **Sustainability: Multi-Disciplinary Perspectives** Heriberto Cabezas, Urmila Diwekar, 2012-11-14 The concept of sustainability is inherently multi disciplinary because it concerns a complex system having economic technological ecological political and other perspectives Consequently any effort in the area of sustainability involves concepts principles and methods from engineering the social sciences including economics and social psychology the biological sciences including ecology and the physical sciences Sustainability Multi Disciplinary Perspectives discusses multidisciplinary aspects of the salient concepts principles

and methods relevant to sustainability in a coherent and comprehensive manner Topics covered range from green engineering and sustainability metrics to infrastructure and environmental policy

Biodiversity and Environmental Philosophy Sahotra Sarkar, 2005-09-19 This book explores the epistemological and ethical issues at the foundations of environmental philosophy emphasising the conservation of biodiversity Sahotra Sarkar criticises attempts to attribute intrinsic value to nature and defends an anthropocentric position on biodiversity conservation based on an untraditional concept of transformative value Unlike other studies in the field of environmental philosophy this book is as much concerned with epistemological issues as with environmental ethics It covers a broad range of topics including problems of explanation and prediction in traditional ecology and how individual based models and Geographic Information Systems GIS technology is transforming ecology Introducing a brief history of conservation biology Sarkar analyses the consensus framework for conservation planning through adaptive management He concludes with a discussion of directions for theoretical research in conservation biology and environmental philosophy

Exploratory Data Analysis Using Fisher Information Roy Frieden, Robert A. Gatenby, 2010-05-27 Sustainability is often used in a qualitative sense However there is at present a great need to quantitatively measure and monitor its many qualitative aspects in real systems Real systems are regarded as sustainable if they can maintain their current desirable productivity and character without creating unfavorable conditions elsewhere or in the future 1 4 Sustainability therefore incorporates both concern for the future of the current system temporal sustainability and concern about the degree to which some areas and cultures of the planet are improved at the expense of other areas and cultures spatial sustainability That is sustainability is to hold over both space and time Sustainability encompasses many disciplines For example economic systems are not sustainable if they degrade their natural resource base and impoverish some sectors of the human population 5 6 Indices are needed that will measure sustainability through time and over space at several scales These indices must also have the ability to aggregate the many disciplinary facets of sustainability often incorporated through a large number of environmental social and economic variables Such a multidisciplinary dynamic system can be regarded as sustainable if it maintains a desirable steady state or regime including fluctuations that are desirable such as those that respond to natural disturbances 8

Using the Biological Literature Diane Schmidt, 2014-04-14 The biological sciences cover a broad array of literature types from younger fields like molecular biology with its reliance on recent journal articles genomic databases and protocol manuals to classic fields such as taxonomy with its scattered literature found in monographs and journals from the past three centuries Using the Biological Literature A Practical Guide Fourth Edition is an annotated guide to selected resources in the biological sciences presenting a wide ranging list of important sources This completely revised edition contains numerous new resources and descriptions of all entries including textbooks The guide emphasizes current materials in the English language and includes retrospective references for historical perspective and to provide access to the taxonomic literature It covers both print and electronic

resources including monographs journals databases indexes and abstracting tools websites and associations providing users with listings of authoritative informational resources of both classical and recently published works With chapters devoted to each of the main fields in the basic biological sciences this book offers a guide to the best and most up to date resources in biology It is appropriate for anyone interested in searching the biological literature from undergraduate students to faculty researchers and librarians The guide includes a supplementary website dedicated to keeping URLs of electronic and web based resources up to date a popular feature continued from the third edition

Landscape Urbanism and Green Infrastructure Thomas Panagopoulos, 2019-08-19 This volume examines the applicability of landscape urbanism theory in contemporary landscape architecture practice by bringing together ecology and architecture in the built environment Using participatory planning of green infrastructure and application of nature based solutions to address urban challenges landscape urbanism seeks to reintroduce critical connections between natural and urban systems In light of ongoing developments in landscape architecture the goal is a paradigm shift towards a landscape that restores and rehabilitates urban ecosystems Nine contributions examine a wide range of successful cases of designing livable and resilient cities in different geographical contexts from the United States of America to Australia and Japan and through several European cities in Italy Portugal Estonia and Greece While some chapters attempt to conceptualize the interconnections between cities and nature others clearly have an empirical focus Efforts such as the use of ornamental helophyte plants in bioretention ponds to reduce and treat stormwater runoff the recovery of a poorly constructed urban waterway or participatory approaches for optimizing the location of green stormwater infrastructure and examining the environmental justice issue of equitable availability and accessibility to public open spaces make these innovations explicit Thus this volume contributes to the sustainable cities goal of the United Nations

Scientist Richard Rhodes, 2023-10-17 A masterful and timely biography of the hugely influential biologist and naturalist E O Wilson one of the most ground breaking and controversial scientists of our time from the Pulitzer Prize winning author of *The Making of the Atomic Bomb* Few biologists have been as productive ground breaking or controversial as Edward Osborne Wilson At 92 years old he may be the most eminent American scientist in any field today Fascinated from an early age by the natural world in general and ants in particular his field work on them and on all social insects has vastly expanded our knowledge of their many species and fascinating ways of being This work led to his 1975 book *Sociobiology* which created an intellectual firestorm with his contention that all animal behavior including that of humans is governed by the laws of evolution and genetics Wilson has since become a leading voice on the crucial importance of biodiversity and has worked tirelessly to synthesize science and the humanities in a fruitful way A towering figure in his own right Richard Rhodes has had complete and unfettered access to Wilson his associates and his papers in writing this book The result is one of the most accomplished anticipated and urgently necessary scientific biographies in years

Foundations of Biogeography Mark V. Lomolino, Dov F. Sax, James H. Brown, 2004-07 Foundations of

Biogeography provides facsimile reprints of seventy two works that have proven fundamental to the development of the field. From classics by Georges Louis LeClerc, Comte de Buffon, Alexander von Humboldt and Charles Darwin to equally seminal contributions by Ernst Mayr, Robert MacArthur and E O Wilson, these papers and book excerpts not only reveal biogeography's historical roots but also trace its theoretical and empirical development. Selected and introduced by leading biogeographers, the articles cover a wide variety of taxonomic groups, habitat types and geographic regions. *Foundations of Biogeography* will be an ideal introduction to the field for beginning students and an essential reference for established scholars of biogeography, ecology and evolution.

Immunity Alfred I. Tauber, 2017-01-02. Modern immunology traditionally conceives of the immune system as providing defense against pathogens. Alfred I Tauber criticizes this conception of immunity as too narrow because it discounts much of the immune system's other normal functions. These include active tolerance of nutritional exchanges with the environment and the stabilization of cooperative relationships with resident microorganisms. An expanded account extends immunity's functional role from singular defense to broadened discernment of environmental exchange. This ecological perspective has profound theoretical implications for the basic notion of immune identity: is reconfigured, highlighting the organism as a holobiont, a consortium of diverse organisms living in cooperative relationships. This challenges prevailing concepts of individuality and the self/nonself dichotomy heretofore organizing immune theory. Indeed, if theoretical interest is focused on the challenges of maintaining immune balance in the full ecological context of the organism, then immune regulation assumes new complexity. Tauber maintains that the key to unravelling that puzzle requires a critical re-assessment of the cognitive processes that underlie immune effector functions. Accordingly, he provides the outline of a re-formulated cognitive paradigm that dispenses with agent-based models and adopts an ecologically conceived understanding of perception and information processing. The implications of this revised configuration of immunity and its deconstructed notions of individuality and selfhood have wide significance for philosophers and life scientists working in immunology, ecology and the cognitive sciences.

Ecological Paradigms Lost Beatrix Beisner, 2005-08-23. This edited volume in the Theoretical Ecology series addresses the historical development and evolution of theoretical ideas in the field of ecology. Not only does *Ecological Paradigms Lost* recount the history of the discipline by practitioners of the science of ecology, it includes commentary on these historical reflections by philosophers of science. Even though the theories discussed are in many cases at the forefront of research, the language and approach make this material accessible to non-theoreticians. The book is structured in 5 major sections including population ecology, epidemiology, community ecology, evolutionary biology and ecosystem ecology.

In each section a chapter by an eminent experienced ecologist is complemented by analysis from a newer cutting edge researcher Reflection on the past and future of ecology A historical overview of major ideas in the field of ecology Pairing of historical views by ecologists along with a philosophical commentary directed at the practicing scientists views by a philosopher of science Historical analysis by practicing ecologists including anecdotal experiences that are rarely recorded Based on a very popular symposium at the 2002 Ecological Society of America annual meeting in Tucson AZ Woody Plants and Forest Ecosystems in a Complex World – Ecological Interactions and Physiological Functioning Above and Below Ground Boris Rewald,Christian Ammer,Thorsten Grams,Henrik Hartmann,Guenter Hoch,Katharina Maria Keiblinger,Andrey V. Malyshev,Ina Christin Meier,2020-04-01 **Dreaming of Sheep in Navajo Country** Marsha Weisiger,2011-11-15 Dreaming of Sheep in Navajo Country offers a fresh interpretation of the history of Navajo Din pastoralism The dramatic reduction of livestock on the Navajo Reservation in the 1930s when hundreds of thousands of sheep goats and horses were killed was an ambitious attempt by the federal government to eliminate overgrazing on an arid landscape and to better the lives of the people who lived there Instead the policy was a disaster resulting in the loss of livelihood for Navajos especially women the primary owners and tenders of the animals without significant improvement of the grazing lands Livestock on the reservation increased exponentially after the late 1860s as more and more people and animals hemmed in on all sides by Anglo and Hispanic ranchers tried to feed themselves on an increasingly barren landscape At the beginning of the twentieth century grazing lands were showing signs of distress As soil conditions worsened weeds unpalatable for livestock pushed out nutritious native grasses until by the 1930s federal officials believed conditions had reached a critical point Well intentioned New Dealers made serious errors in anticipating the human and environmental consequences of removing or killing tens of thousands of animals Environmental historian Marsha Weisiger examines the factors that led to the poor condition of the range and explains how the Bureau of Indian Affairs the Navajos and climate change contributed to it Using archival sources and oral accounts she describes the importance of land and stock animals in Navajo culture By positioning women at the center of the story she demonstrates the place they hold as significant actors in Native American and environmental history Dreaming of Sheep in Navajo Country is a compelling and important story that looks at the people and conditions that contributed to a botched policy whose legacy is still felt by the Navajos and their lands today *New Perspectives on the History of Life Sciences and Agriculture* Denise Phillips,Sharon Kingsland,2015-02-12 This volume explores problems in the history of science at the intersection of life sciences and agriculture from the mid eighteenth to the mid twentieth century Taking a comparative national perspective the book examines agricultural practices in a broad sense including the practices and disciplines devoted to land management forestry soil science and the improvement and management of crops and livestock The life sciences considered include genetics microbiology ecology entomology forestry and deal with US European Russian Japanese Indonesian Chinese contexts The book shows that the investigation of the border zone of life sciences and

agriculture raises many interesting questions about how science develops. In particular, it challenges one to re-examine and take seriously the intimate connection between scientific development and the practical goals of managing and improving perhaps even recreating the living world to serve human ends. Without close attention to this zone, it is not possible to understand the emergence of new disciplines and transformation of old disciplines, to evaluate the role and impact of such major figures of science as Humboldt and Mendel, or to appreciate how much of the history of modern biology has been driven by national ambitions and imperialist expansion in competition with rival nations.

Relational Architectural Ecologies Peg Rawes, 2013-08-22

Examining the complex social and material relationships between architecture and ecology which constitute modern cultures, this collection responds to the need to extend architectural thinking about ecology beyond current design literatures. This book shows how the habitats, natural milieus, places or shelters that construct architectural ecologies are composed of complex and dynamic material, spatial, social, political, economic, and ecological concerns. With contributions from a range of leading international experts and academics in architecture, art, anthropology, philosophy, feminist theory, law, medicine, and political science, this volume offers professionals and researchers engaged in the social and cultural biodiversity of built environments new interdisciplinary perspectives on the relational and architectural ecologies which are required for dealing with the complex issues of sustainable human habitation and environmental action. The book provides 16 essays, including two visual essays, by leading international experts and academics from the UK, US, Australia, New Zealand, and Europe, including Rosi Braidotti, Lorraine Code, Verena Andermatt Conley, and Elizabeth Grosz. A clear structure divided into 5 parts addresses bio-political ecologies and architectures, uncertain, anxious, and damaged ecologies, economics, land, and consumption, biological and medical architectural ecologies, relational ecological practices and architectures. An exploration of the relations between human and political life. An examination of issues such as climate change, social and environmental well-being, land and consumption, economically damaging global approaches to design, community ecologies, and future architectural practice.
