*Fractures of the Acetabulum* Emile Letournel,Robert Judet,2012-12-06 At the request of our publishers I accepted the task of preparing this second edition I felt this was necessary for several reasons new imaging technologies such as CT scanning and 3 D reconstructions are now used routinely the indications for employing improved approaches are clearer and reconstructions are facilitated by new internal fixation devices Above all I thought it was time to report the long term results of the 940 acetabular fractures 90070 of which were treated surgically a unique series In spite of the experience acquired from the three previous reviews of cases 1966 1971 and 1978 I failed to foresee the amount of time this revision would need In fact it took more than 3 years to follow up the larger number of cases and 159 patients out of 800 i e 22 7% were not included as they had moved since their last review and simply could not be located At a time when it is in fashion to evaluate the cost of health care it is strange to see how public administrators so keen on evaluating the immediate cost of our operations do not care about the quality of their long term results which appears to us however to be the best basis for the choice of the initial treatment
