

Step 3: Configure routing on the routers.

Static and dynamic routing protocols are used in different chapter labs. Please refer to the chapter instructions to determine which routing protocol is used in each chapter lab.

Step 4: Configure PC host IP settings.

Configure a static IP address, subnet mask, and default gateway for PC-A and PC-C, as shown in the IP addressing table.

Step 5: Verify connectivity between PC-A and R3.

- a. Ping from R1 to R3.

If the pings are not successful, troubleshoot the basic device configurations before continuing.

- b. Ping from PC-A on the R1 LAN to PC-C on the R3 LAN.

If the pings are not successful, troubleshoot the basic device configurations before continuing.

Note: If you can ping from PC-A to PC-C, you have demonstrated that static routing is configured and functioning correctly. If you cannot ping but the device interfaces are up and IP addresses are correct, use the `show run` and `show ip route` commands to help identify routing protocol-related problems.

Part 3: Router Access for CCP

In Part 3 of this lab, you will set up a router for use with CCP by enabling a secure HTTP server, creating a privileged user account, and configuring a SSH and Telnet access.

Step 1: Connect to your router through Telnet or SSH or the console.

Enter the global configuration mode using the command:

```
Router> enable
Router# configure terminal
```

Step 2: Enable the router as a HTTP server.

- a. Enable HTTP server.

```
Router(config)# ip http server
```

- b. For a secure connection, enable the secure HTTP server.

```
Router(config)# ip http secure-server
* Generating 1024 bit RSA keys, keys will be non-exportable...
[OK] (elapsed time was 3 seconds)
```

```
R1(config)#
*Jan 1 17:23:44.103: %SSH-5-ENABLED: SSH 1.99 has been enabled
*Jan 1 17:23:44.218: %PKI-6-NONAUTOSAVE: Configuration was modified. Issue
"write memory" to save new certificate
```

Note: A secure HTTP server can only be enabled for cryptography-enabled Cisco IOS Software images. It is also possible to connect using an unsecure connection if the command `ip http server` is configured; however, this is an unsecure connection and not recommended for production environments.

- c. Configure authentication for HTTP access using the local authentication.

```
Router(config)# ip http authentication local
```
