Cell Cycle Control Frontiers In Molecular Biology:

Cell Cycle Control Christopher Hutchison, David M. Glover, 1995 What makes a cell begin the complicated process of cell division How does it stop What happens when things go wrong The use of developing technologies has revealed the extraordinary degree to which cell cycle control mechanisms have been conserved through eukaryotic evolution This is the first book to cover the cell cycle field in the wake of groundbreaking research from the past five years A historical look at cell cycle findings places this new knowledge into perspective and demonstrates the universality of cell cycle control from the evolutionary process to cancer research and mitotic regulation Cell cycle research is the most exciting area in contemporary biology and anyone either interested or involved in the cell cycle field will find this an invaluable study **Advanced**

Molecular Biology Richard Twyman, 2018-12-20 Advanced Molecular Biology emphasises the unifying principles and mechanisms of molecular biology with frequent use of tables and boxes to summarise experimental data and gene and protein functions Extensive cross referencing between chapters is used to reinforce and broaden the understanding of core concepts This is the ideal source of comprehensive authoritative and up to date information for all those whose work is in the field of molecular biology This book emphasises the unifying principles and mechanisms of molecular biology with frequent use of tables and boxes to summarise experimental data and gene and protein functions *Molecular and Cellular Genetics*

Edward Bittar, 1996-09-24 The tools of molecular biology have revolutionised our understanding of gene structure and function and changed the teaching of genetics in a fundamental way The transition from classical genetics to molecular genetics was initiated by two discoveries One was the discovery that DNA has a complementary double helix structure and the other that a universal genetic code does exist Both led to the acceptance of the central dogma that RNA molecules are made on DNA templates The last twenty years have seen remarkable growth in our knowledge of molecular genetics most of which is the outcome of recombinant DNA technology This technology which is not limited to cloning sequencing and expression has created a biotechnology industry of its own the purpose of which is to develop new diagnostic and therapeutic approaches in medicine Both industries in collaboration with the biomedical community are now engaged in laying down the foundation of molecular medicine The present volume seeks to provide a coherent account of the new science of molecular genetics Its content however is by no means exhaustive partly because of the publication explosion but more because of space restrictions A rudimentary knowledge of genetics on the reader's part is assumed Quite understandably considerable emphasis is placed on major technical advances but not without expounding numerous new ideas and phenomena including alternative splicing PCR DNA methylation genomic imprinting and so on **Structure and Function in Cell Signalling**

John Nelson, 2008-08-06 This book contains extremely detailed and informative content on structure and function of ligands receptors and signalling intermediates plus interactions the extent of detail and appropriate referencing is impressive Microbiology Today July 2009 A very well written book suitable for use as a reference or textbook for an undergraduate

subject in cell signalling For researchers interested in the molecular basis of cell signalling and how aberrant regulation of cell signalling proteins causes diseases this is an excellent resource of biochemical and structural information Australian Biochemist August 2009 From basics to details this is an elegantly written and carefully edited book The chapters on cell cycle control and oncogenesis are particularly fascinating and valuable to biomedical research This is the book to have if you are interested in molecular mechanisms of signal transduction It is a great introduction to the literature that will be welcomed by students and experts alike Doody s January 2009 This text is a concise and accessible introduction to the dynamic but complex field of signal transduction Rather than simply cataloguing all signalling molecules and delineating every known pathway this book aims to break signalling down into common elements and activities the nuts and bolts of cellular information exchange With an emphasis on clarity of presentation throughout the book teaches the basic principles focusing on a mature core of knowledge providing students with a foundation of learning in this complex and potentially confusing subject It also addresses the issue of variation in the numbering of key amino acids as well as featuring interaction with RasMol software and exercises to aid understanding An accessible introduction to the complex field of cell signalling Interacts with RasMol software freely downloadable for viewing structures in 3D Includes exercises and clear instructions in the use of RasMol Well illustrated in full colour throughout Structure and Function in Cell Signalling is an invaluable resource to students across a range of life science degree programmes including biochemistry cell and molecular biology physiology biomedicine and oncology This book provides a clear accessible introduction to this rapidly expanding field

Bacterial Transcription Factors and the Cell Cycle Morigen Morigen, Monika Glinkowska, Jianping Xie, 2022-02-10

HMG-CoA Reductase Inhibitors Gerd Schmitz, Michael Torzewski, 2012-12-06 HMG CoA reductase inhibitors statins are established drugs for the treatment of hypercholesterolemia Furthermore they induce regression of vascular atherosclerosis as well as reduction of cardiovascular related morbidity and death in patients with and without coronary artery disease This book deals with statins which have substantially altered the approach to therapy of atherosclerosis and its sequelae Emphasis is placed on the scientific background to the discoveries and the development of the therapy including an overview of the current state of knowledge of the drugs Clinical data are reviewed extensively This book not only provides the reader with valuable information but also stimulates further research into the pathogenesis of atherosclerosis and the mechanisms behind the action of effective statins It sets the stage for creative

thinking among scientists of many disciplines for the accomplishment of our ultimate goals in treating atherosclerosis and its sequelae This topical volume **Cellular Dormancy: State Determination and Plasticity** Guang Yao,Alexis Ruth Barr,Jyotsna Dhawan,2022-09-15 **Patterning in Vertebrate Development** Cheryll Tickle,2003 One of the most fascinating problems in biology is how a single cell the fertilised egg gives rise to a new individual The fertilised egg divides many times to form an embryo This volume in the Frontiers in Molecular Biology series discusses the methods by which cells in distinct regions of an embryo become different a process known as patterning Patterning is fundamental to establishing the spatial organisation of the developing embryo It ensures that all the parts of the body are generated and that they form in exactly the right places The ultimate in patterning is the formation of precise arrangements of specialised cells and tissues within each organ Understanding the process of patterning during the embryonic development of vertebrates is a particular challenge for developmental biologists because vertebrates have an intricate and complex anatomy and histology The first two chapters of Patterning in Vertebrate Development are introductory explaining to the reader the general principles of vertebrate patterning and early embryology The subsequent chapters address patterning in both nervous system and specific parts of the body Each chapter provides a detailed review of current research in a specific area of interest These include topics such as neural specification antero posterior patterning of the neural tube and molecular basis of vertebrate limb development Throughout the volume examples are drawn from a number of species and particular emphasis is placed on recent discoveries about the molecular basis of patterning in vertebrates The book concludes with a chapter which revisits many of the regions of the embryo previously discussed from an evolutionary perspective **Apoptosis** Michael D. Jacobson,Nicola J. McCarthy,2002 The number of cells within the human body is very tightly regulated too many and we can develop cancer too few and we may lose cells that we cannot replace The number of cells is controlled by several different mechanisms in different tissues but all are triggered to commit suicide should too many be in one place at one time or become damaged This book examines how this process of cell suicide apoptosis is regulated and how our understanding of this process may lead to novel treatments for a wide variety of human diseases **Plant Signal Transduction** Dierk Scheel,Claus Wasternack,2002-03-28 Plant growth and development is controlled by environmental cues e g light salinity that are sensed by the plant via a variety of signal transduction pathways This book gives an up to date summary of the large amount of information that is now available on the processes involved in the communication of plants with their environment **The Association Between Viral Infection and Human Cancers** Ming Hu,Jinlin Li,Bin Wang,Chengjun Wu,2024-02-13 Research on the mechanisms of viral transformation and oncogenesis has laid the foundation for our current understanding of certain cancers For instance some oncogenes are activated or taken over by retroviruses and some viral proteins impair tumor suppressor gene functions Particular viruses from multiple virus families as well as unusual or unclassified viruses have been implicated in causing cancers through natural occurrence or experimentation on animals It is believed that 15% to

20% of all human cancer cases are linked to infections by one of seven viruses Epstein Barr virus hepatitis B virus hepatitis C virus human herpesvirus 8 human T cell lymphotropic virus type 1 human papillomaviruses and Merkel cell polyomavirus

GTPases Alan Hall, 2000

GTPases are molecular switches that are used to control biochemical pathways This book describes the properties and cellular roles of all the major families of GTPases All cells use GTPases to regulate the delivery of amino acids to the ribosome during protein synthesis but eukaryotes with their complex and compartmentalized environment have exploited the versatility of GTPases to a much greater extent In particular GTPases play a central role in regulating signal transduction pathways activated by extracellular signals and in regulating the trafficking of proteins between different organelles It is not surprising therefore that GTPases have become a center of attention for those studying the control of proliferation differentiation cell polarity cell movement and vesicle and protein trafficking This book provides a complete guide to this area and should be essential reading for cell and molecular biologists biochemists and geneticists interested in these contemporary problems
