The Choanoflagellates Barry S. C. Leadbeater, 2015-01-08 Choanoflagellates have three distinctive claims to fame they are the closest living unicellular relatives of animals they are a major component of aquatic microbial foodwebs and one group is remarkable for its siliceous basket like coverings. This landmark book offers a unique synthesis of over forty years of choanoflagellates research. Key areas are covered from the phylogenetic evidence supporting the sister group relationship between choanoflagellates and Metazoa to choanoflagellate distribution and diversity in marine and freshwater environments. The structure and assembly of choanoflagellate loricae is also presented together with a full discussion of a novel example of regulatory evolution suggesting that the switch from nudiform to
