Cell immortalization Progress In Molecular And Subcellular Biology V 24:

Cell immortalization Alvaro Macieira-Coelho, 2013-04-17 The problem of the long term proliferation of cells is a seminal one. It has always been a hot subject in biology, a source of far reaching hypotheses even more so now when explanations for the mechanisms of cell proliferative mortality or immortality seem within our reach. A question which is still debated is whether an infinite division potential can be a normal trait or is always the result of modifications leading to abnormal cell growth and escape from homeostasis. In general, investigators have been advocates of one of the two extremes: universal limited or unlimited normal proliferative potential. Since the long term proliferative potential of cells concerns regulation of development, regeneration of tissues and homeostatic control of cell growth in brief survival of living organisms and since the regulation of these processes is so different along the evolutionary scale, it is not surprising that there does not seem to be any universal trait. The question of whether cells are endowed with finite or infinite proliferative phenotypes has to be seen using the perspective of comparative biology.

Biology of Aging Alvaro Macieira-Coelho, 2012-12-06 The survival of the human species has improved significantly in modern times. During the last century the mean survival of human populations in developed countries has increased more than during the preceding 5000 years. This improvement in survival was accompanied by an increase in the number of active years. In other words, the increase in mean life span was accompanied by an increase in health span. This is now accentuated by progress in medicine reducing the impact of physiologic events such as menopause and of pathological processes such as atherosclerosis. Up to now research on aging, whether theoretical or experimental, has not contributed to improvement in human survival. Actually, there is a striking contrast between these significant modifications in survival and the present knowledge of the mechanisms of human aging. Revealed by this state of affairs are the profound disagreements between gerontologists in regard to the way of looking at the aging process. The definition of aging itself is difficult to begin with because of the variability of how it occurs in different organisms.

Aging Shamim I. Ahmad, 2017-10-30 This book is a detailed and comprehensive synthesis of the scientific study of aging. Dozens of contributions from leading scholars review various theories of aging and molecular, cellular, biochemical and microbial aspects of aging among just a few of the topics included. Authoritative, wide ranging and thorough, this book will act as a source for experimental design, a comprehensive description of age related diseases and provide information of the latest molecular theories underlying their causes. Additionally, it will target industries involved in developing anti aging drugs. Post graduate medical students and university libraries.

Biomedical Science J. Robin Harris,Viktor I. Korolchuk,2019-02-18 This new volume in the Subcellular Biochemistry series will focus on the biochemistry and cellular biology of aging processes in human cells The chapters will be written by experts

in their respective fields and will focus on a number of the current key areas of research in subcellular aging research. Main topics for discussion are mitochondrial aging, protein homeostasis and aging, and the genetic processes that are involved in aging. There will also be chapters that are dedicated to the study of the roles of a variety of vitamins and minerals on aging, and a number of other external factors: microbiological, ROS, inflammation, nutrition. This book will provide the reader with a state-of-the-art overview of the subcellular aging field. This book will be published in cooperation with a second volume that will discuss the translation of the cell biology of aging to a more clinical setting, and it is hoped that the combination of these two volumes will bring a deeper understanding of the links between the cell and the body during aging. *Molecular Genetic Analysis of Human Cellular Senescence and Immortalization* Patrick John Hensler, 1995
