Arias,2024-11-07 Originally published in 1993 as part of the Ethnoscapes Current Challenges in the Environmental Social Sciences series reissued now with a new series introduction The Meaning and Use of Housing presents a re evaluation of the use and meaning of residential environments It integrates methodological and philosophical approaches to assist in the making of comparisons across issues concerns disciplines and countries and links theory research and practice It spans the globe reviewing studies of every conceivable form of housing In these studies a wide range of social science design management and policy perspectives are harnessed to enrich our understanding of the central place in people s life their homes Civitas by Design Howard Gillette, Jr.,2011-06-06 Since the end of the nineteenth century city planners have aspired not only to improve the physical living conditions of urban residents but also to strengthen civic ties through better design of built environments From Ebenezer Howard and his vision for garden cities to today s New Urbanists these visionaries have sought to deepen civitas or the shared community of citizens In Civitas by Design historian Howard Gillette Jr takes a critical look at this planning tradition examining a wide range of environmental interventions and their consequences over the course of the twentieth century As American reform efforts moved from progressive idealism through the era of government urban renewal programs to the rise of faith in markets planners attempted to cultivate community in places such as Forest Hills Gardens in Queens New York Celebration Florida and the post Katrina Gulf Coast Key figures including critics Lewis Mumford and Oscar Newman entrepreneur James Rouse and housing reformer Catherine Bauer introduced concepts such as neighborhood units pedestrian shopping malls and planned communities that were implemented on a national scale Many of the buildings landscapes and infrastructures that planners envisioned still remain but frequently these physical designs have proven insufficient to sustain the ideals they represented Will contemporary urbanists efforts to

join social justice with environmentalism generate better results Gillette places the work of reformers and designers in the context of their times providing a careful analysis of the major ideas and trends in urban planning for current and future policy makers

Visual Pollution Adriana Portella, 2016-02-11 In recent years there has been considerable interest in the problems that public spaces face because of the design of commercial signs The negative consequences that commercial signs can have on the visual quality of urban areas and further more on people's quality of life has been studied from both architectural planning and psychological perspectives While the issue of visual pollution as this phenomenon is commonly described has been widely debated there is as yet no clear conclusion as to how best to control commercial signage and whether different urban contexts and people from different backgrounds and cultures have universal or distinct preferences Several different commercial signage approaches are currently applied to different historic cities but these initiatives are not based on principles derived from the perception and evaluation of users Drawing on a range of comparative and contrasting empirical studies of historic city centres in the UK and Brazil this book examines questions of commercial signage control management the preservation of historic heritage and user preference and satisfaction The author takes an environment behaviour approach to this research involving theories concepts and methodologies related to environmental psychology architecture planning and urban design In doing so it argues that there are in fact visual preferences common to the majority of people independent of their urban context and that these common views can be useful to the development of a general theory of how to control commercial signage In conclusion the book suggests that the best way of controlling signage is not only to recommend general guidelines related to the operation of commercial signage but also to recommend design principles that can create commercial streetscapes evaluated positively by different users

A Reflexive Reading of Urban Space Mona A. Abdelwahab, 2018-02-13 Providing a critique of the concepts attached to the representation of urban space this groundbreaking book formulates a new theory of space which understands the dynamic interrelations between physical and social spaces while tracing the wider urban context It offers a new tool to approach the reading of these interrelations through reflexive reading strategies that identify singular reading fragments of the different spaces through multiple reader time space relations The strategies proposed in the volume seek to develop an integrative reading of urban space through recognition of the singular influenced by discourse institution etc and temporal influenced by reading perspective in space and time thereby providing a relational perspective that goes beyond the paradox of place in between social and physical space identifying each in terms of relationships oscillating between the conceptual the physical and social content and the context In conclusion the book suggests that space place can be read through sequential fragments of people place context mind and author reader Operating at different scales between conceptual space and reality the sequential reading helps the

recognition of multiplicity and the dynamics of place as a transformational process without hierarchy or classification
