**Creating and Restoring Wetlands** Christopher Craft, 2022-05-12 Creating and Restoring Wetlands From Theory to

Practice Second Edition describes the challenges and opportunities relating to the restoration of freshwater and estuarine wetlands in natural agricultural and urban environments in the coming century. This second edition is structured by clearly defined chapters based on specific wetland types e.g. Peatlands, Mangroves, and with a consistent and coherent organization for ease of discoverability. The table of contents is divided into four main subjects: Foundations, Restoration of Freshwater Wetlands, Restoration of Estuarine Wetlands, and From Theory to Practice, each with multiple chapters. Part 1: Foundations contains chapters describing definitions of wetlands, ecological theory used to guide restoration, and considerations on where to implement restoration on the landscape. In Parts 2 and 3, restoration of specific freshwater marshes, forests, peatlands, and estuarine tidal marshes, mangroves, wetlands are described. Part 4: From Theory to Practice contains chapters describing performance standards to gauge success of projects and case studies describing small scale and large scale restoration projects of various freshwater and estuarine wetlands. Each chapter contains clearly labeled sections which assist the reader to quickly and easily key in on the subject matter that they are seeking. The approach of *Creating and Restoring Wetlands* is unique in that in each chapter it links ecological theory important to ecosystem restoration with practical techniques to undertake and implement successful wetland restoration projects, including recommendations for performance standards to gauge success as well as realistic expectations and timescales for achieving success. Each chapter ends with a summary table describing keys to ensure success for a given wetland ecosystem. Each chapter ends with a summary table describing keys to ensure success for a given wetland ecosystem. Written by a single author providing a consistent structure that is coherent, cohesive, and well referenced. Contains case studies of small and large scale restoration activities ensuring relevance to individuals and organizations.

*Energy Production in the Mississippi River Delta* J. W. Day, R. G. Hunter, H. C. Clark, 2022-04-12. For nearly a century the energy industry had a profound impact on the Mississippi Delta, including both the natural and socio-economic systems. The purpose of this book is to describe the delta, how oil and gas O & G activities have impacted both natural and socio-economic systems, and how much of the degradation could have been avoided. The Mississippi Delta formed over the past six thousand years but in less than a century lost 25 percent of coastal wetlands. O & G activities contributed significantly to this loss. O & G production began in the early 20th century and over 600 conventional fields were developed. Production ramped up rapidly, peaking around 1970, then declined. As O & G production declines, produced water dominates fluid production, and this high salinity brine is laced with a variety of toxins. Often O & G was produced rapidly and much was left in the ground and is now technically and economically unavailable. With careful planning, this situation could have been avoided. The industry also affected the regulatory framework by weakening regulations, enforcement, and impacts were not adequately addressed, and more profits flowed out of state. Thus the state was economically and environmentally worse off. The industry should be compelled to contribute expertise and financial resources to restoration of the delta.

[Handbook for Restoring Tidal Wetlands](#) Joy B. Zedler, 2000-08-30 Efforts to direct the recovery of damaged sites and landscapes date back as far as the 1930s. If we fully understood the conditions and controlling variables at restoration sites, we would be better equipped to predict the outcomes of restoration efforts. If there were no constraints, we could merely plant the restoration site and walk away. However, *Tropical Peatland Eco-management* Mitsuru Osaki, Nobuyuki Tsuji, Nazir Foad, Jack Rieley, 2021-04-09 In this *Tropical Peatland Eco-management* book, eco-management is new terminology as an abbreviation of ecology-based management for natural capital enhancement. Key concept on this eco-management is derived from previous book *Tropical Peatland Ecosystem* Springer 2015, eds by M. Osaki and N. Tsuji. Based on this new concept, this book thoroughly examines tropical peatland eco-management for scientists, political decision makers, governmental officials, land managers, students, and NGO/NPOs who are interested in: 1) what the impact of peatland on climate change and ecosystem function; 2) how the management of disturbed peatland; and 3) drawing global-scale restoration mechanisms of peatland and wetland. In tropical peatland, a large amount of GHGs (carbon dioxide, methane, and nitrous oxide) is emitted due to the inappropriate development and inadequate management of peatland. The peatland ecosystems consist of the carbon-water complex, which is affected easily by the impact of human and climate change. Throughout much research of tropical peatland, the problems that result from development of tropical peatland are found to stem mainly from a lack of understanding of the complexities of this ecosystem and the fragility of the relationship between peat and forest, and also between carbon and water. In the past, almost all peatland development and management systems have been generally designed on a water drainage system. On the contrast of old system, an innovated eco-management is here proposed as a water irrigation system including water cycling and natural capital enhancement. Through this book, readers will learn the advanced peatland eco-management with more practical methods and procedure based on ecosystem knowledge. **Corporate Espionage, Geopolitics, and Diplomacy Issues in**

**Restoration of Ecosystems - Bridging Nature and Humans** Stefan Zerbe, 2023-02-13 In this interdisciplinary textbook which bridges the gap between the natural and social sciences, both the scientific principles of restoration ecology and practical aspects of ecosystem restoration are comprehensively presented. The diversity of land use types with a focus on Central Europe is highlighted and case studies of practical restoration projects are presented. The textbook offers students who deal with the environment as well as scientists and practitioners a profound and up to date but also critical overview of the state of knowledge. This book opens up the broad spectrum of degraded ecosystems of Central European natural and cultural landscapes. In further chapters, marine ecosystems and their restoration as well as development potentials and the limits of restoration are discussed in more detail. The ecological fundamentals are expanded through an interdisciplinary perspective taking into account environmental ethics, sociology, anthropology and economics. In addition to an up to date overview of the various areas and fields of activity in restoration ecology and ecosystem restoration, the textbook provides a valuable basis for studies, science and practice. The students also receive assistance in searching for literature and critical fact analysis and the lecturers on teaching formats and interdisciplinary approaches to discussion in restoration ecology.
