Antenna Systems for

Modern Wireless Devices Shiban K. Koul, S. Swapna, G. S. Karthikeya, 2024-06-27 This book presents up to date information about WLAN antenna designs for students researchers and professionals who want to design radiating systems to be deployed for practical coverage The book primarily focuses on pattern diversity antennas Pattern diversity antennas are very vital in wireless communication High correlation between multiple signals can result in low data throughput which can be solved by using antennas with pattern diversity Beam scanning antennas and their variants are also described in detail Pattern diversity antenna systems with multipoint feeds are also comprehensively discussed in this book For a multipoint system to maintain a reasonable link budget equal antenna gains are preferred for the required antenna coverage The book further describes the latest techniques to enhance and equalize the antenna gain within a compact radiating system With increasing demand for faster connectivity with minimum path loss the demand for high gain antennas is rapidly increasing Thereby a detailed discussion on gain enhancement with the latest high gain antenna designs is requisite while describing

WLAN antennas Some antenna designs discussed in the book are based on additive manufacturing for their design and fabrication Additive manufacturing is a much sought after technology today that allows rapid development of antennas at an affordable cost Many recent WLAN antennas make use of this technology to develop versatile antenna designs Finally the book includes a section on wide band antenna designs Antenna designs that reduce the scanning loss are also discussed
