

Process Safety Management Assessment Tool Guide (continued)

- Review the 20 Risk Based Process Safety elements and select elements of immediate interest to your organization; delete the tabs of elements that you do not intend to assess. CCPS determined that at least 6 of the elements are critical to success: Process Safety Culture, Compliance with Standards, PHA, Management of Change, Asset Integrity and Reliability and Metrics.
- Review the practices for selected elements of interest. Delete any practices that may not apply to your organization. Change the language/terminology of any practices that would not be readily understood by your organization, use terms that your organization can relate to.
- Establish a multi-year timeframe to track progress to desired maturity.
- Revise scoring system if required (e.g. adding weights to practices). Simple scores used without weights in the attachment.
- Get relevant teams to complete the assessment in facilitated sessions. The facilitator must understand the tool and the language of the best practices.
- Track assessment results on radar charts.
- The benefit of self assessment is not the actual percentage scores, but rather the relative scores (low, intermediate or high level of maturity) and identification of gaps to work on.
