*Overshoot* William R. Catton,1980-10-01 Our day to day experiences over the past decade have taught us that there must be limits to our tremendous appetite for energy natural resources and consumer goods Even utility and oil companies now promote conservation in the face of demands for dwindling energy reserves And for years some biologists have warned us of the direct correlation between scarcity and population growth These scientists see an appalling future riding the tidal wave of a worldwide growth of population and technology A calm but unflinching realist Catton suggests that we cannot stop this wave for we have already overshot the Earth s capacity to support so huge a load He contradicts those scientists engineers and technocrats who continue to write optimistically about energy alternatives Catton asserts that the technological panaceas proposed by those who would harvest from the seas harness the winds and farm the deserts are ignoring the fundamental premise that the principals of ecology apply to all living things These principles tell us that within a finite system economic expansion is not irreversible and population growth cannot continue indefinitely If we disregard these facts

our sagging American Dream will soon shatter completely
