Swanson, 2016-11-11 This book details cutting edge methods and findings that may shape the future of applied demography Inside readers will discover new insights into the databases substantive issues and methodological approaches that can help them to improve how they use demography in decision making and planning problems in both public and private settings The topics and perspectives are found in the book's 23 chapters which are organized into three major sections I Demographic Information for Decision Making Case Studies II Data Issues and Analyses and III Projection and Estimation Methods Evaluations Examples and Discussions Coverage includes chapters on migration demographic market analysis future courtroom needs trends in the needs of the elderly access to health care longitudinal data systems census costs and new approaches to small area estimation and projection methods The case studies represent a wide range of countries including Australia Canada China England India Japan and the United States of America Overall this edited volume collects papers that were presented at different conferences including the 8th international conference on population geographies University of Queensland 2015 the 2014 Applied Demography Conference San Antonio Texas USA and the annual conference of the Canadian Population Society Applied demography touches many aspects of our lives and its practitioners continue to push methodological and empirical boundaries This book documents the steady evolution of this field It shows demographers sociologists economists planners marketers and others how they can improve the quality and relevance of demographic information now and in the future *APAIS 1992: Australian public affairs information service*, **APAIS 1999: Australian public affairs information service**, Regional Cities and City Regions in Rural Australia Peter John Smailes, Trevor Louis Charles Griffin, Neil Michael Argent, 2018-07-16 The book examines the extent to which the sustained population growth of Australia's heartland regional centres has come at the expense of demographic decline in their own hinterlands and ultimately of their entire regions It presents a longitudinal study over the period 1947-2011 of the extensive functional regions centred on six rapidly growing non-metropolitan cities in south-eastern Australia emphasising rapid change since 1981 The selected cities are dominantly service centres in either inland or remote coastal agricultural settings The book shows how intensified age-specific migration and structural ageing arising from macro-economic reforms in the 1980s fundamentally changed the economic and demographic landscapes of the case study regions It traces the demographic consequences of the change from

a relative balance between central city minor urban centres and dispersed rural population within each functional region in 1947 to one of extreme central city dominance by 2011 and examines the long term implications of these changes for regional policy The book constitutes the first in depth longitudinal study over the entire post WWII period of a varied group of Australian regional cities and their hinterlands defined in terms of functional regions It employs a novel set of indices which combine numerical and visual expression to measure the structural ageing process *Perspectives on Development and Population Growth in the Third World* O.G. Simmons, 2012-12-06 Until the early to mid 1970s social scientists in the fields of population and development were largely going their own ways Demographers relied almost exclusively on demographic transition theory as their paradigm for understanding the role of development in population change and fertility decline Conversely most development economists and other specialists were certainly aware of the constraints placed upon development objectives by population growth However the main development theories paid little attention to population and the implications of population growth for development Indeed it was not until after the World Population Conference in Bucharest in 1974 that the interaction of population and development became a serious and positive theme for social scientific study Accordingly since about the mid 1970s an extensive literature in the field of population and development has been generated And in 1975 under the auspices of The Population Council the journal *Population and Development Review* was founded a journal which in the past decade has developed into the premier publication in the world for work in this area But our understanding of development as it refers to change in Third World countries remained fragmented Moreover our understanding of the linkages and interactions between population and development was very limited It is in this regard that Ozzie Simmons's *Perspectives on Development and Population Growth in the Third World* will certainly have an impact
