Fuzzy Systems and Knowledge Discovery Lipo Wang, Yaochu Jin, 2005-08-17 This book and its sister volume LNAI 3613 and 3614 constitute the proceedings of the Second International Conference on Fuzzy Systems and Knowledge Discovery FSKD 2005 jointly held with the First International Conference on Natural Computation ICNC 2005 LNCS 3610 3611 and 3612 from August 27-29 2005 in Changsha Hunan China FSKD 2005 successfully attracted 1249 submissions from 32 countries regions the joint ICNC FSKD 2005 received 3136 submissions After rigorous reviews 333 high quality papers i e 206 long papers and 127 short papers were included in the FSKD 2005 proceedings representing an acceptance rate of 26.7% The ICNC FSKD 2005 conference featured the most up to date research results in computational algorithms inspired from nature including biological, ecological and physical systems It is an exciting and emerging interdisciplinary area in which a wide range of techniques and methods are being studied for dealing with large complex and dynamic problems The joint conferences also promoted cross fertilization over these exciting and yet closely related areas which had a significant impact on the advancement of these important technologies Specific areas included computation with words fuzzy computation granular computation neural computation quantum computation evolutionary computation DNA computation chemical computation information processing in cells and tissues molecular computation artificial life swarm intelligence ants colony artificial immune systems etc with innovative applications to knowledge discovery, nanotechnology operations research and more

Fuzzy Modeling and Control Hung T. Nguyen, Nadipuram R. Prasad, 1999-03-30 This collection compiles the seminal contributions of Michio Sugeno on fuzzy systems and technologies Fuzzy Modeling Control Selected Works of Sugeno serves as a singular resource that provides a clear comprehensive treatment of fuzzy control systems The book comprises two parts fuzzy system identification and modeling systems control Each part outlines the fundamentals of fuzzy logic and covers essential material for understanding the mathematical and modeling details in Sugeno's works Introductory chapters include extended summaries of each paper or group of papers suggesting where the theories discussed might be useful in application

Fundamentals of Fuzzy Sets Didier Dubois, Henri Prade, Henri M. Prade, 2000-01-31 Fundamentals of Fuzzy Sets covers the basic elements of fuzzy set theory Its four part organization provides easy referencing of recent as well as older results in the field The first part discusses the historical emergence of fuzzy sets and delves into fuzzy set connectives and the representation and measurement of membership functions The second part covers fuzzy relations including orderings similarity and relational equations The third part devoted to uncertainty modelling introduces possibility theory contrasting and relating it with probabilities and reviews information measures of specificity and fuzziness

The last part concerns fuzzy sets on the real line computation with fuzzy intervals metric topology of fuzzy numbers and the calculus of fuzzy valued functions Each chapter is written by one or more recognized specialists and offers a tutorial introduction to the topics together with an extensive bibliography Fuzzy Model Identification Hans Hellendoorn,Dimiter Driankov,2012-12-06 During the past few years two principally different approaches to the design of fuzzy controllers have emerged heuristics based design and model based design The main motivation for the heuristics based design is given by the fact that many industrial processes are still controlled in one of the following two ways The process is controlled manually by an experienced operator The process is controlled by an automatic control system which needs manual on line trimming of its parameters by an experienced operator In both cases it is enough to translate in terms of a set of fuzzy if then rules the operator s manual control algorithm or manual on line trimming strategy in order to obtain an equally good or even better wholly automatic fuzzy control system This implies that the design of a fuzzy controller can only be done after a manual control algorithm or trimming strategy exists It is admitted in the literature on fuzzy control that the heuristics based approach to the design of fuzzy controllers is very difficult to apply to multiple inputmultiple output control problems which represent the largest part of challenging industrial process control applications Furthermore the heuristics based design lacks systematic and formally verifiable tuning tech niques Also studies of the stability performance and robustness of a closed loop system incorporating a heuristics based fuzzy controller can only be done via extensive simulations

Interpretability Issues in Fuzzy Modeling Jorge Casillas,O. Cordon,Francisco Herrera Triguero,Luis Magdalena,2013-06-05 Fuzzy modeling has become one of the most productive and successful results of fuzzy logic Among others it has been applied to knowledge discovery automatic classification long term prediction or medical and engineering analysis The research developed in the topic during the last two decades has been mainly focused on exploiting the fuzzy model flexibility to obtain the highest accuracy This approach usually sets aside the interpretability of the obtained models However we should remember the initial philosophy of fuzzy sets theory directed to serve the bridge between the human understanding and the machine processing In this challenge the ability of fuzzy models to express the behavior of the real system in a comprehensible manner acquires a great importance This book collects the works of a group of experts in the field that advocate the interpretability improvements as a mechanism to obtain well balanced fuzzy models Fundamentals of the Fuzzy Logic-Based Generalized Theory of Decisions Rafik Aziz Aliev,2013-01-12 Every day decision making and decision making in complex human centric systems are characterized by imperfect decision relevant information Main drawback of the existing decision theories is namely incapability to deal with imperfect information and modeling vague preferences Actually a paradigm of non numerical probabilities in decision making has a long history and arose also in Keynes s analysis of uncertainty There is a need for further generalization a move to decision theories with perception based imperfect information described in NL The languages of new decision models for human centric systems should be not

languages based on binary logic but human centric computational schemes able to operate on NL described information Development of new theories is now possible due to an increased computational power of information processing systems which allows for computations with imperfect information particularly imprecise and partially true information which are much more complex than computations over numbers and probabilities The monograph exposes the foundations of a new decision theory with imperfect decision relevant information on environment and a decision maker s behavior This theory is based on the synthesis of the fuzzy sets theory with perception based information and the probability theory The book is self containing and represents in a systematic way the decision theory with imperfect information into the educational systems The book will be helpful for teachers and students of universities and colleges for managers and specialists from various fields of business and economics production and social sphere

Enric Trillas,Piero P. Bonissone,Luis Magdalena,Janusz Kacprzyk,2012-01-10 The unexpected and premature passing away of Professor Ebrahim H Abe Mamdani on January 22 2010 was a big shock to the scientific community to all his friends and colleagues around the world and to his close relatives Professor Mamdani was a remarkable figure in the academic world as he contributed to so many areas of science and technology Of great relevance are his latest thoughts and ideas on the study of language and its handling by computers The fuzzy logic community is particularly indebted to Abe Mamdani 1941 2010 who in 1975 in his famous paper An Experiment in Linguistic Synthesis with a Fuzzy Logic Controller jointly written with his student Sedrak Assilian introduced the novel idea of fuzzy control This was an elegant engineering approach to the modeling and control of complex processes for which mathematical models were unknown or too difficult to build yet they could effectively and efficiently be controlled by human operators This ground breaking idea has found innumerable applications and can be considered as one of the main factors for the proliferation and adoption of fuzzy logic technology Professor Mamdani s own life and vital experience are illustrative of his never surrendering attitude while facing adversaries which is normal for a person proposing any novel solution and represent a great example for everybody His subtle sense of humor his joy for life and his will to critically help people especially young people were characteristics deeply appreciated by all the people who enjoyed and benefited from his friendship and advice This book constitutes a posthumous homage to Abe Mamdani It is a collection of original papers related in some way to his works ideas and vision and especially written by researchers directly acquainted with him or with his work The underlying goal of this book will be fulfilled if in the very spirit of Mamdani s legacy the papers will trigger a scientific or philosophical debate on the issues covered or contribute to a cross fertilization of ideas in the various fields

Granular Computing and Intelligent Systems Witold Pedrycz, Shyi-Ming Chen, 2011-04-28 Information granules are fundamental conceptual entities facilitating perception of complex phenomena and contributing to the enhancement of human centricity in intelligent systems The formal frameworks of information granules and information granulation comprise fuzzy sets interval analysis probability rough sets and shadowed sets to name only a few representatives Among current developments of Granular Computing interesting options concern information granules of higher order and of higher type The higher order information granularity is concerned with an effective formation of information granules over the space being originally constructed by information granules of lower order This construct is directly associated with the concept of hierarchy of systems composed of successive processing layers characterized by the increasing levels of abstraction This idea of layered hierarchical realization of models of complex systems has gained a significant level of visibility in fuzzy modeling with the well established concept of hierarchical fuzzy models where one strives to achieve a sound tradeoff between accuracy and a level of detail captured by the model and its level of interpretability Higher type information granules emerge when the information granules themselves cannot be fully characterized in a purely numerical fashion but instead it becomes convenient to exploit their realization in the form of other types of information granules such as type 2 fuzzy sets interval valued fuzzy sets or probabilistic fuzzy sets Higher order and higher type of information granules constitute the focus of the studies on Granular Computing presented in this study The book elaborates on sound methodologies of Granular Computing algorithmic pursuits and an array of diverse applications and case studies in environmental studies option price forecasting and power engineering
