Feral Children And Clever Animals Reflections On Human Nature:

Feral Children and Clever Animals Douglas K. Candland, 1993 Weaving together diaries contemporary newspaper accounts and his own enlightening commentary Candland brings to life a series of extraordinary stories of nonspeaking humans and animals who were thought to be able to speak

Feral Children and Clever Animals Douglas Keith Candland, 1996

Feral Children and Clever Animals Douglas K. Candland, 1995-10-26 In this provocative book Douglas Candland shows that as we begin to understand the way animals and non speaking humans think we hold up a mirror of sorts to our own mental world and gain profound insights into human nature Weaving together diaries contemporary newspaper accounts and his own enlightening commentary Candland brings to life a series of extraordinary stories He begins with a look at past efforts to civilize feral children We meet Victor the Wild Boy of Aveyron now famous as the subject of a Truffaut film Kaspar Hauser raised in a cell civilized and then assassinated and the Wolf Girls of India found early this century huddled among wolf pups in a forest den they were originally believed to be ghosts by superstitious villagers who nearly shot them as they were being captured In each case it was hoped that the study of these children would help clarify the age old nature nurture debate but as Candland shows so much of the information revealed was really only a projection of beliefs previously held by the investigating scientists Candland then turns to clever animals We learn how the investigation of Clever Hans the German horse who could calculate square roots proved to be a first step in the direction of behaviorism researchers found that Hans was being tipped off by the subtle and unwitting body language of his owner and other observers who would bend almost imperceptibly at the waist with every hoof beat and stand erect when the correct count was reached And Candland discusses the many attempts to communicate with our closest neighbor the apes We read of Richard Lynch Garner's 1892 experiment living with chimpanzees in Gabon he taught one to say the French word feu and of Gua raised by W N and L A Kellogg alongside their own son Donald and of the latest successes of teaching sign language to such precocious apes as Sarah Sherman Austin and Koko Throughout Candland illuminates the boldest and most intriguing efforts yet to extend our world to that of our fellow creatures And he shows that in the end our effort to make contact is a reflection of the way in which we as a species create and order our universe Humans have long shown a wish to connect with the silent minds around them In assembling and interpreting the compelling tales in this book Candland offers us a new understanding not only of the animal kingdom but of the very nature of humanity and our place in the great chain of being

Comparative Reflections on Persons and Selves Pavel Stankov, Michael Dufresne, 2023-06-14 What matters in personal survival What makes self awareness possible If there is no permanent self should we be altruistic These and other questions were tackled by the international participants in the 2018 Uehiro Graduate Student Philosophy Conference at University of Hawai'i at Mānoa Their responses explore the subject of subjecthood from interdisciplinary and comparative perspectives Some approach it from an analytic point of view others from a historical and as many as five draw from non Western traditions to argue their

points We have selected seven of the 21 papers presented at the conference Given their comparative scope they provide a slightly unusual sample of the discussions in philosophy of self and personhood today The collection would be of interest not only to graduate students and professional philosophers but also to anyone curious about the comparative methods used to investigate the self in philosophy

Encounters with Wild Children Adriana S. Benzaquén, 2006-04-05 Through detailed readings of a wide variety of accounts debates and representations *Encounters with Wild Children* explores the many different meanings these children were given and the varied responses they elicited Adriana Benzaquén explains why wild children continue to haunt and fascinate Western scientists and shows how the knowledge they have generated in different disciplines including anthropology psychology psychiatry pedagogy linguistics and sociology has contributed to the shaping and reshaping of the modern understanding of the child and affected the social and institutional practices directed at all children in schools welfare mental health and the law

Absorption Johannes Bronkhorst, 2012 This book argues for the central role played by absorption in the functioning of the human mind The importance of absorption makes itself felt in different ways the two studies combined in this book concentrate on two of them The first study argues that largely as a result of language acquisition humans have two levels of cognition which in normal circumstances are simultaneously active Mental absorption is a or the means to circumvent some perhaps all of the associations that characterize one of these two levels resulting in what is sometimes referred to as mystical experience but which is not confined to mysticism and plays a role in various religious phenomena and elsewhere The second study takes as point of departure some puzzling statements in the early Buddhist canon that raises serious questions of a psychological nature An essential element in the psychological theory proposed is the observation that mental absorption is a source of pleasure Since the human mind is in large part guided by pleasure which it seeks to repeat states of absorption leave memory traces that subsequently direct the mind However these memory traces do not recall the states of absorption themselves but rather the objects or circumstances that accompanied them The resulting activity of the mind differs in this way from person to person and can pursue wildly diverging goals Publisher description

Developmental Psychology Margaret Harris, George Butterworth, 2002 *Developmental Psychology A Student's Handbook* is a major textbook that provides an up to date account of theory and research in the rapidly changing field of child development Margaret Harris and George Butterworth have produced an outstanding volume that includes recent research from Britain Europe and the USA The text is designed for undergraduate students who have little or no prior knowledge of developmental psychology Key features include Specially designed textbook features such as key term definitions chapter summaries and annotated further reading sections Over 95 figures and tables to illustrate principles described in the text Additional boxed material to add further insight and aid understanding Clear user friendly layout to make topics easy to locate The book places developmental psychology in its historical context tracing the emergence of the field as an independent discipline at the end of the 19th century and following the radical changes that

have occurred in our understanding of children's development since then. The development of the child is covered in sequence through conception, pre-natal development, birth, infancy and the pre-school years to the achievements of the school years and the changes that occur during adolescence. Each period is addressed in terms of cognitive, social and linguistic development, including discussion of reading, spelling and mathematical development. There is also consideration of comparative research concerning the development of cognitive abilities in other primates. *Developmental Psychology A Student's Handbook* is essential reading for all undergraduate students of developmental psychology. It will also be of interest to those in education and healthcare studying child development.

Animals and the Moral Community Gary Steiner, 2008. Gary Steiner argues that ethologists and philosophers in the analytic and continental traditions have largely failed to advance an adequate explanation of animal behavior. Critically engaging the positions of Marc Hauser, Daniel Dennett, Donald Davidson, John Searle, Martin Heidegger and Hans Georg Gadamer among others, Steiner shows how the Western philosophical tradition has forced animals into human experiential categories in order to make sense of their cognitive abilities and moral status and how desperately we need a new approach to animal rights. Steiner rejects the traditional assumption that a lack of formal rationality confers an inferior moral status on animals vis-à-vis human beings. Instead, he offers an associationist view of animal cognition in which animals grasp and adapt to their environments without employing concepts or intentionality. Steiner challenges the standard assumption of liberal individualism according to which humans have no obligations of justice toward animals. Instead, he advocates a cosmic holism that attributes a moral status to animals equivalent to that of people. Arguing for a relationship of justice between humans and nature, Steiner emphasizes our kinship with animals and the fundamental moral obligations entailed by this kinship.

Handbook of Autism Spectrum Disorder and the Law Fred R. Volkmar, Rachel Loftin, Alexander Westphal, Marc Woodbury-Smith, 2021-09-22. This book addresses an important and relatively neglected topic in the scientific literature: individuals with autism spectrum disorder (ASD) who have dealings with the legal system. It examines issues and implications for autistic people who have a significant risk for engagement with the legal system in some capacity, e.g., witness, bystander, victim, or perpetrator. Key areas of coverage include: Autistic people as victims and perpetrators of criminal activities including violence, stalking, sexual exploitation, and cybercrime; Risks for unlawful behavior in individuals with autism and Asperger's; Legal assessment issues such as witness protection and postconviction diagnoses; Legal outcomes for autistic people including case law, prevention, service provisions in correctional settings, and rights and support systems. *The Handbook of Autism Spectrum Disorder and the Law* is an essential comprehensive resource that explores the risk for unlawful behaviors affecting autistic people as victims and perpetrators, as well as related issues of assessment and treatment and outcome. It is a must-have reference for researchers, clinicians, practitioners, and graduate students in psychology, psychiatry, social work, and law, as well as professionals in such related fields as criminology, criminal justice, and the legal system.

Sensing the Divine Michael N.

Marsh,2021-08-10 This book proposes another unique basis for the origins of religion from disturbances in brain function It proposes the novel idea that near death and out of body experiences ND OBE engendered a sense of the divine in ancient man As the author points out key aspects of ND OBE are thematic of all later established religions These include journeys to heaven sightings of brightly lit godlike figures and dead people now alive Thus ND OBE could be the originating source of these spiritual motifs To this the author adds a fourth factor various brain influences contribute to or modulate ND OBE Such cognate neurological disorders include REM sleep intrusions sleep paralysis narcolepsy and the Guillain Barr syndrome Errors due to aberrant switching between key neural control centers disrupt critical state boundaries between consciousness and dreaming This may induce NDE Thus in this state subjects temporarily fail to understand where they are undergo loss of self and detached from the world They imagine a union with Gods Here then is the biological basis of ineffability Ancient humans gained beliefs about the supernatural through day to day existence This book argues that near death experiences and cognate neurological conditions some genetically determined could have facilitated even augmented such beliefs Hence in configuring another realm of spiritual experience beyond the known environment these neurological possibilities offer effective traction

Anthropocentrism and Its Discontents Gary Steiner,2005-11-06 Anthropocentrism and Its Discontents is the first ever comprehensive examination of views of animals in the history of Western philosophy from Homeric Greece to the twentieth century In recent decades increased interest in this area has been accompanied by scholars willingness to conceive of animal experience in terms of human mental capacities consciousness self awareness intention deliberation and in some instances at least limited moral agency This conception has been facilitated by a shift from behavioral to cognitive ethology the science of animal behavior and by attempts to affirm the essential similarities between the psychophysical makeup of human beings and animals Gary Steiner sketches the terms of the current debates about animals and relates these to their historical antecedents focusing on both the dominant anthropocentric voices and those recurring voices that instead assert a fundamental kinship relation between human beings and animals He concludes with a discussion of the problem of balancing the need to recognize a human indebtedness to animals and the natural world with the need to preserve a sense of the uniqueness and dignity of the human individual

Challenging Sociality Kathleen Richardson, 2018-06-30 This book explores the

development of humanoid robots for helping children with autism develop social skills based on fieldwork in the UK and the USA Robotic scientists propose that robots can therapeutically help children with autism because there is a special affinity between them and mechanical things This idea is supported by autism experts that claim those with autism have a preference for things over other persons Autism is also seen as a gendered condition with men considered less social and therefore more likely to have the condition The author explores how these experiments in cultivating social skills in children with autism using robots while focused on a unique subsection is the model for a new kind of human thing relationship for wider society across the capitalist world where machines can take on the role of the you in the relational encounter Moreover underscoring this is a form of consciousness that arises out of specific forms of attachment styles

When Elephants Weep Jeffrey

Moussaieff Masson, 2009-10-21 This national bestseller exploring the complex emotional lives of animals was hailed as a masterpiece by Elizabeth Marshall Thomas and as marvelous by Jane Goodall. The popularity of *When Elephants Weep* has swept the nation as author Jeffrey Masson appeared on Dateline NBC, Good Morning America, and was profiled in *People* for his ground breaking and fascinating study. Not since Darwin's *The Expression of Emotions in Man and Animals* has a book so thoroughly and effectively explored the full range of emotions that exist throughout the animal kingdom. From dancing squirrels to bashful gorillas to spiteful killer whales, Masson and coauthor Susan McCarthy bring forth fascinating anecdotes and illuminating insights that offer powerful proof of the existence of animal emotion. Chapters on love, joy, anger, fear, shame, compassion, and loneliness are framed by a provocative re-evaluation of how we treat animals, from hunting and eating them to scientific experimentation. Forming a complete and compelling picture of the inner lives of animals, *When Elephants Weep* assures that we will never look at animals in the same way again. *The Philosophical Ethology of Vinciane Despret* Brett

Buchanan, Matthew Chrulaw, Jeffrey Bussolini, 2018-10-19 Vinciane Despret is a Belgian philosopher whose work proposes new questions and approaches to human-animal relations. Of central importance to her thought is an intellectual and cultural proposal to allow animals to show their agency and allow them to be interesting. With genuine curiosity, Despret looks at how humans and animals transform one another through daily encounters, and she explores these metamorphoses through an engagement with the history of philosophy, literature, science, field research, and art. In a playful though serious tone, Despret claims that animals are always more interesting than we give them credit for, and that the achievements of animals are never far from our own. This book was originally published as a special issue of *Angelaki*, Journal of the Theoretical Humanities.

A Passion To Believe Diane Twachtman-Cullen, 2019-03-01 This book lays the foundation for the qualitative investigation into facilitated communication (FC). It addresses the contextual world of FC and examines some of FC's most controversial issues. It takes a penetrating look at the FC culture and the forces that shape it. **Dog politics** Mariam

Motamedi Fraser, 2024-01-30 Do dogs belong with humans? Scientific accounts of dogs' species story, in which contemporary dog-human relations are naturalised with reference to dogs' evolutionary becoming, suggest that they do. *Dog politics* dissects this story. This book offers a rich empirical analysis and critique of the development and consolidation of dogs' species story in science, asking what evidence exists to support it and what practical consequences for dogs follow from it. It explores how this story is woven into broader scientific shifts in understandings of species, animals, and animal behaviours, and how such shifts were informed by and informed transformative political events, including slavery and colonialism, the Second World War, and its aftermath, and the emergence of anti-racist movements in the twentieth and twenty-first centuries. The book pays

particular attention to how species thinking bears on race, racism, and individuals. **Facing the Wild** Chilla Bulbeck, 2012 What do wild animals mean to humans? Will they survive both rampant habitat loss and extinction caused by human encroachment, and as ecotourists, our enthusiasm for them? With ecotourism now the fastest growing segment of tourism, and

encounters with wild animals be it swimming with dolphins going on safari or bird watching ever more popular these are critical questions Yet until now little has been known about why people crave encounters with wild animals and the meaning for the ecotourism industry conservation efforts and society at large Facing the Wild is the first serious empirical examination of why people seek out animals in their natural environment what the desire for this experience tells us about the meanings of animals nature authenticity and wilderness in contemporary industrialized societies and whether visitors change their environmental perspectives and behaviour as the custodians of wildlife parks would like them to The book explores the contradictions and ambivalence that so many people experience in the presence of wild nature in loving it we may diminish it and in the act of wanting to see it we may destroy it Ultimately the book makes a case for respectful stewardship of a hybrid nature and provides insight for both practitioners and ecotourists alike
