Minority Students in Special and Gifted Education National Research Council, Division of Behavioral and Social Sciences and Education, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on Minority Representation in Special Education, 2002-08-30 Special education and gifted and talented programs were designed for children whose educational needs are not well met in regular classrooms From their inception these programs have had disproportionate representation of racial and ethnic minority students What causes this disproportion Is it a problem Minority Students in Special and Gifted Education considers possible contributors to that disparity including early biological and environmental influences and inequities in opportunities for preschool and K 12 education as well as the possibilities of bias in the referral and assessment system that leads to placement in special programs It examines the data on early childhood experience on differences in educational opportunity and on referral and placement The book also considers whether disproportionate representation should be considered a problem Do special education programs provide valuable educational services or do they set students off on a path of lower educational expectations Would students not now placed in gifted and talented programs benefit from raised expectations more rigorous classes and the gifted label or would they suffer failure in classes for which they are unprepared By examining this important problem in U S education and making recommendations for early intervention and general education as well as for changes in referral and assessment processes Minority Students in Special and Gifted Education will be an indispensable resource to educators throughout the nation as well as to policy makers at all levels from schools and school districts to the state and federal governments

Teacher Evaluation and Professional Development on Student Outcomes Edward Crowe, Rena F. Subotnik, 2012-07-01 This particular case study is designed to explore the extent to which a teacher evaluation system is effective. It also addresses the challenge of measuring student achievement gains when the students in question are already at the high end of the scale, a different yet important problem in an era when many concentrate on low hanging fruit or students on the bubble between failure and marginal performance. By presenting a realworld case, various research methods for studying issues raised by the case, and the interchange among scholars engaged in this effort, this volume will allow educational policymakers and practitioners to decide if a proposed approach is compelling and relevant for their settings. Concurrently, a comparison of various research methods addressing a real school based problem provides an important learning tool for the research community and for those who study and make policy. We also believe that the case study and the research designs will be useful for those with responsibility for framing and funding a research agenda in education that utilizes strong research designs applied to topics that matter to student outcomes at all levels of the U S education system and at all levels of pupil performance. And finally, we hope that doctoral programs that seek to prepare the next generation of education researchers will find our approach helpful in their work.
