Ferry And Brandons Cost Planning Of Buildings:

Cost Planning of Buildings Douglas John Ferry, 1964 Ferry and Brandon's Cost Planning of Buildings Richard Kirkham, 2013-02-05

Ferry and Brandon's *Cost Planning of Buildings* provides a comprehensive introduction to the practice and procedures of cost planning in the procurement of buildings. The eighth edition of this leading textbook has been thoroughly updated to reflect the significant changes that have occurred in the UK construction industry since the new millennium. Whilst retaining its core structure of the three phase cost planning process originally developed by Ferry and Brandon, the text provides a thorough grounding in contemporary issues including procurement innovation, whole life cycle costing and modelling techniques. Designed to support the core cost planning studies covered by students reading for degrees in quantity surveying and construction management, it provides a platform for understanding the fundamental importance of effective cost planning practice. The principals of elemental cost planning are covered from both pre and post contract perspectives; the role of effective briefing and client stakeholder engagement as best practice is also reinforced in this text. In his revisions, Richard Kirkham reflects the many changes in the construction industry in the past eight years. Procurement is given prominence early in the book; the changing role of the quantity surveyor and building economist is discussed, as is the crucial role they assume throughout the project life cycle. He emphasises the importance of early and collaborative working in the design team, as well as the impact of whole life cycle costing.

Ferry and Brandon's Cost Planning of Buildings Richard Kirkham, 2014-09-29

This new edition of the classic quantity surveying textbook retains its basic structure but has been thoroughly updated to reflect recent changes in the industry, especially in procurement. Although over the last 20 years a number of new procurement methods have evolved and become adopted, the recession has seen many clients revert to established traditional methods of procurement, so the fundamentals of cost planning still apply and should not be ignored. The first edition of this leading textbook was published in 1964 and it continues to provide a comprehensive introduction to the practice and procedures of cost planning in the procurement of buildings. This 9th edition has been thoroughly updated to reflect changes that have occurred in the UK construction industry in the past six years. Whilst retaining its core structure of the three phase cost planning process originally developed by Ferry and Brandon, the text provides a thorough grounding in contemporary issues including procurement innovation, whole life cycle costing and modelling techniques. Designed to support the core cost planning studies covered by students reading for degrees in quantity surveying and construction management, it provides a platform for understanding the fundamental importance of effective cost planning practice. The principals of elemental cost planning are covered from both pre and post contract perspectives; the role of effective briefing and client stakeholder engagement as best practice is also reinforced in this text. This new edition addresses The Soft Landings Framework, a new govt initiative especially for schools, to make buildings perform radically better and much more sustainably. Puts focus on actual performance in use at brief stage during design and

construction and especially before and after handover Covers recent changes in procurement especially under the NEC and PFI Provides more on PPP and long term maintenance issues Offers an improved companion website with tutorial worksheets for lecturers and Interactive spreadsheets for students e g development appraisal models lifecycle costing models

Cost Planning of Buildings Douglas J. Ferry, Peter S. Brandon, 1991

Building Cost Planning for the Design Team Jim Smith, D M Jaggar, Peter Love, 2016-02-26

Cost management of all building projects has become increasingly important as clients in the public and private sector demand the highest quality cost planning services with accurate budgeting and cost control All members of the design team must integrate their activities to ensure that a high quality project is delivered on time and within budget This book considers building cost planning and cost control from the client and the design team's perspective where all decisions whether concerned with design cost quality time value or sustainability are taken as being interrelated The latest Royal Institute of British Architects RIBA Plan of Work and the New Rules of Measurement for Early Stage Estimating and Cost Planning issued by the Royal Institution of Chartered Surveyors RICS have been incorporated into this new text The book follows the building design cost planning process from the crucial inception stages and then through all the design stages to the completion of the technical design contract documentation and the tender It provides a template for good cost planning practice An essential addition to this third edition is the introduction of integrated design and documentation processes captured in building Information modelling BIM on line cost databases and computerised methods of cost planning The integrated approaches are explained and provide vital information and knowledge for practitioners involved in building projects All stakeholders involved in development and design and client teams in public and private sector policy making and implementation need to understand the new approaches to design management processes and how cost planning and design approaches are adapting to using the new technology in practice The interactive style using in text and review questions makes this ideal for students and practitioners alike in property architecture construction economics construction management real estate engineering facilities management and project management

Cost Planning of Buildings D.J. Ferry, 1974

Building Maintenance Brian J.B. Wood, 2009-09-28

Maintaining a building is expensive it costs many times more to run a building over its lifetime than to build it yet maintenance is often not accorded the priority it warrants A poorly maintained building will be a drain on resources and will impair building use whereas a well maintained building will function smoothly and represent an appreciating asset to its owners Building Maintenance is a core text on the technical aspects of maintenance for undergraduate degree students on built environment courses particularly building surveying and facilities management It addresses the who what where when how and why of maintenance activities and shows that maintenance should be considered seriously at the design stage Extensive case studies illustrate what can go wrong how to put matters right and how to get it right first time next time A professional approach is required to building maintenance By encouraging maintenance managers to stand back and take a strategic view of building maintenance
