

## Urinary Tract

The study of the urinary tract is vast, diverse, and essential, in both basic and clinical physiology, pharmacology, and all levels of care.

The normal patterns of the kidney and bladder are described in Chap. 8 (Figs. 8.1–8.8 and 8.9, pp. 22–25).

### Renal Parenchyma

The diagnosis of acute renal failure is indignant, and the main advantage of ultrasound is that it rules out the possibility of an obstructive (1).

Ultrasonics suggestive of acute renal failure will be noticed on increased volume (Fig. 8.1). Chronic renal failure would give small kidneys with thinning of the parenchyma and irregular borders (Fig. 8.2). Kidneys can show global differentiation. The parenchyma can resemble the same (parenchymal differentiation), within the parenchyma, nodular pyramids and cortex can be hard to detect (cortico-medullary differentiation). However, these patterns do not seem useful in emergency situations.

Acute pyelonephritis is usually fairly or not accessible to two-dimensional ultrasound, but severe disease can sometimes be diagnosed. Figure 8.3 shows the routine ultrasound of a 62-year-old female, admitted for acute sepsis, with massive bilateral enlargement of the kidneys, with no differentiation. Diagnosis was necrotizing pyelonephritis with diffuse pyelonephritis.

Renal hypertension is difficult to diagnose by ultrasound (Fig. 8.4). Nephromegaly, pyelonephritis, a rare finding, gives gas bubbles within the parenchyma. In the case of severe obstructive renal failure, renal size is usually enlarged kidneys with complete differentiation. Renal function is presented in Chap. 10.

A renal cyst is a bright finding. In view of its great frequency, we have a characteristic example (Fig. 8.5) and a case of renal polycystic disease (Fig. 8.6).

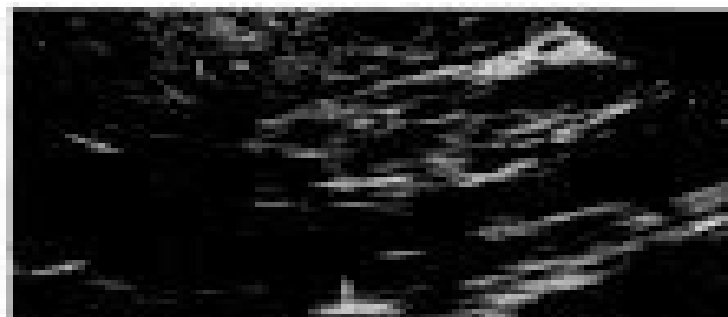

Fig. 8.1. Acute renal failure. The kidney has a homogeneous echogenic pattern, but, morphology and function are normal (2). The renal cortex is enlarged, and the kidney is heavily enlarged. This is not, as most of all renal failure is longitudinal.

Fig. 8.2. Chronic renal failure. Small size (normal), irregular, pyelonephritis, and irregular borders.
