Guide to Genetic Programming, 2008 Genetic programming GP is a systematic domain independent method for getting computers to solve problems automatically starting from a high level statement of what needs to be done. Using ideas from natural evolution GP starts from an ooze of random computer programs and progressively refines them through processes of mutation and sexual recombination until high fitness solutions emerge. All this without the user having to know or specify the form or structure of solutions in advance. GP has generated a plethora of human competitive results and applications including novel scientific discoveries and patentable inventions. This unique overview of this exciting technique is written by three of the most active scientists in GP. See www.gp-field-guide.org.uk for more information on the book. *NEO 2015*

Oliver Schütze,Leonardo Trujillo,Pierrick Legrand,Yazmin Maldonado,2016-09-15 This volume comprises a selection of works presented at the Numerical and Evolutionary Optimization NEO workshop held in September 2015 in Tijuana Mexico The development of powerful search and optimization techniques is of great importance in today s world that requires researchers and practitioners to tackle a growing number of challenging real world problems In particular there are two well established and widely known fields that are commonly applied in this area i traditional numerical optimization techniques and ii comparatively recent bio inspired heuristics Both paradigms have their unique strengths and weaknesses allowing them to solve some challenging problems while still failing in others The goal of the NEO workshop series is to bring together people from these and related fields to discuss compare and merge their complimentary perspectives in order to develop fast and reliable hybrid methods that maximize the strengths and minimize the weaknesses of the underlying paradigms Through this effort we believe that the NEO can promote the development of new techniques that are applicable to a broader class of problems Moreover NEO fosters the understanding and adequate treatment of real world problems particularly in emerging fields that affect us all such as health care smart cities big data among many others The extended papers the NEO 2015 that comprise this book make a contribution to this goal

Search Methodologies Edmund K. Burke,Graham Kendall,2013-10-18 The first edition of Search Methodologies Introductory Tutorials in Optimization and Decision Support Techniques was originally put together to offer a basic introduction to the various search and optimization techniques that students might need to use during their research and this new edition continues this tradition Search Methodologies has been expanded and brought completely up to date including new chapters covering scatter search GRASP and very large neighborhood search The chapter authors are drawn from across Computer Science and Operations Research and include some of the world s leading authorities in their field The book provides useful guidelines for implementing the methods and frameworks described and offers valuable tutorials to students and researchers in the field As I embarked on the pleasant journey of reading through the chapters of this book I became convinced that this is one of the best sources of introductory material on the search methodologies topic to be found The book s subtitle Introductory Tutorials in Optimization and Decision Support Techniques aptly describes its aim and the editors and contributors to this volume have achieved this aim with remarkable success The chapters in this book are exemplary in giving useful guidelines for implementing the methods and frameworks described Fred Glover Leeds School of Business University of Colorado Boulder USA The book aims to present a series of well written tutorials by the leading experts in their fields Moreover it does this by covering practically the whole possible range of topics in the discipline It enables students and practitioners to study and
