Sustainable use of Genetic Diversity in Forage and Turf Breeding Christian Huyghe, 2010-06-10 Grassland produces feed for livestock improves soil fertility and structure protects water resources and may contribute to climate change mitigation through carbon storage and to biodiversity preservation It simultaneously maintains sustainable economic outputs for farmers and provides ecosystem services Turf similarly considerably contributes to our environment by adding beauty to our surroundings providing a safe playing surface for sports and recreation The species diversity present in most grasslands and turfs is a functional diversity contributing to the previously mentioned agronomic and environmental benefits The species belong to different functional groups and the adequate species composition may maximise the agronomic performance through a higher production and a better quality and the environmental benefits through symbiotic nitrogen fixation or sources of pollen and nectar to pollinators In a given grassland or turf the genetic diversity available in each variety contributes to this economic and environmental performance but also to the stability of these performances including the stability of the resistance against pathogens and pests Natural grasslands share many species with the sown swards They may be regarded as favourable sites for in situ preservation of genetic diversity as well as valuable sources of diversity for breeding

Linear Selection Indices in Modern Plant Breeding J. Jesus Céron-Rojas, José Crossa, 2018-09-26 This open access book focuses on the linear selection index LSI theory and its statistical properties It addresses the single stage LSI theory by assuming that economic weights are fixed and known or fixed but unknown to predict the net genetic merit in the phenotypic marker and genomic context Further it shows how to combine the LSI theory with the independent culling method to develop the multistage selection index theory The final two chapters present simulation results and SAS and R codes respectively to estimate the parameters and make selections using some of the LSIs described It is essential reading for plant quantitative geneticists but is also a valuable resource for animal breeders

Dairy Goats Feeding and Nutrition Antonello Cannas, Giuseppe Pulina, Ana Helena Dias Francesconi, 2008 Dairy goats have long been considered an important source of income for rural populations providing the opportunity for profitable and sustainable diversity for small farms Their importance is also increasing in intensive feeding systems and in large farms They are highly adaptable due to their unique feeding habits and have become popular livestock animals in a range of environments from temperate grasslands to subtropical semi arid and mountainous areas Moreover goat milk products are finding a growing acceptance in the world market and research has increased in feeding strategies for improved productivity and quality Examining all aspects of dairy goat feeding and nutrition this book represents a long awaited review of recent scientific research and updated techniques Chapters discuss aspects such as the modelling and production of goat's milk as well as the estimation of nutrient requirements and food intake of goats

Validation and its Role in Crop Improvement Ahmed Sallam,Ahmad M. Alqudah,Peter Stephen Baenziger,Awais Rasheed,2022-11-08 **DNA Microarrays, Part A: Array Platforms and Wet-Bench Protocols**,2011-08-19 Modern

DNA microarray technologies have evolved over the past 25 years to the point where it is now possible to take many million measurements from a single experiment These two volumes Parts A B in the Methods in Enzymology series provide methods that will shepard any molecular biologist through the process of planning performing and publishing microarray results Part A starts with an overview of a number of microarray platforms both commercial and academically produced and includes wet bench protocols for performing traditional expression analysis and derivative techniques such as detection of transcription factor occupancy and chromatin status Wet bench protocols and troubleshooting techniques continue into Part B These techniques are well rooted in traditional molecular biology and while they require traditional care a researcher that can reproducibly generate beautiful Northern or Southern blots should have no difficulty generating beautiful array hybridizations Data management is a more recent problem for most biologists The bulk of Part B provides a range of techniques for data handling This includes critical issues from normalization within and between arrays to uploading your results to the public repositories for array data and how to integrate data from multiple sources There are chapters in Part B for both the debutant and the expert bioinformatician Provides an overview of platforms Includes experimental design and wet bench protocols Presents statistical and data analysis methods array databases data visualization and meta analysis

Advances in Statistical Methods for the Genetic Dissection of Complex Traits in Plants Yuan-Ming Zhang,Zhenyu Jia,Shang-Qian Xie,Jia Wen,Shibo Wang,Ya-Wen Zhang,2024-01-26 Genome wide association studies GWAS have been widely used in the genetic dissection of complex traits However there are still limits in current GWAS statistics For example 1 almost all the existing methods do not estimate additive and dominance effects in quantitative trait nucleotide QTN detection

2 the methods for detecting QTN by environment interaction QEI are not straightforward and do not estimate additive and dominance effects as well as additive by environment and dominance by environment interaction effects leading to unreliable results and 3 no or too simple polygenic background controls have been employed in QTN by QTN interaction QQI detection As a result few studies of QEI and QQI for complex traits have been reported based on multiple environment experiments Recently new statistical tools including 3VmrMLM have been developed to address these needs in GWAS In 3VmrMLM all the trait associated effects including QTN QEI and QQI related effects are compressed into a single effect related vector while all the polygenic backgrounds are compressed into a single polygenic effect matrix These compressed parameters can be accurately and efficiently estimated through a unified mixed model analysis To further validate these new GWAS methods particularly 3VmrMLM they should be rigorously tested in real data of various plants and a wide range of other species
