Delivering Policy Francesca Scala, 2019-02-15 Are assisted reproductive technologies ARTs such as in vitro fertilization a medical issue or a matter of public policy subject to restrictions In *Delivering Policy* Francesca Scala employs the concept of boundary work to explain the

prolonged debates that ensued when the Canadian government appointed a royal commission in 1989 to draw up a blueprint for legislative action. From the birth of the first test tube baby in 1978 to the Assisted Human Reproduction Act of 2004, Scala reveals how policy makers, civil society actors, and members of the medical/scientific community attempted to define assisted reproductive technologies from within the realms of science or politics. They challenged, defended, or blurred the boundaries or divisions between the two fields of knowledge to secure their position as the authoritative voice on the issue. *Delivering Policy* delineates in vivid detail the people, institutions, and processes that influenced ARTs policy in Canada. This compelling account contributes to our understanding of the interaction between science and politics, the exercise of social control over science and technology, and the politics of expertise in policy making. *DNA and Cell Biology*, 1998 *Genetic Engineering*. Idah Sithole-Niang, 2013-05-22. The book, while having only five chapters, covers a wide range of topics in genetic engineering of microorganisms, plants, and animals. Specifically, it covers both the natural and social sciences. In the natural sciences, topics ranging from the genetic engineering of microorganisms to produce antibiotics, gene targeting, and transformation in plants, the generation of marker-free plants in response to biosafety concerns, as well as the generation of transgenic animals and those derived through cloning are covered. In the social sciences, the issue of ethics in biotechnology and the role of the media in reporting around the cloned sheep Dolly are discussed.
