Seymour, 2017-03-28 This book is dedicated to the great scientist and outstanding individual Nikolay Wladimirovich Timofeeff Ressovsky The book brings together a number of brief stories essays about Timofeeff Ressovsky including Stories told by himself and scientific chapters addressing his major research areas genetics radiobiology radiation ecology and epidemiology and evolution Timofeeff Ressovsky contributed to several fields of biology and established new directions of scientific research He often repeated the phrase which would later become famous Science should not be approached with the ferocity of wild animals In keeping with that philosophy the issues discussed here are still open Each scientific part starts with a current review the chapters present leading scientific schools and views The main theme discussed in the genetics part is mutation variability in the context of linear replication transcription translation and conformational template processes and its dependence on phylogenetic group In turn the radiobiology chapters focus on the reorganization of DNA cell and population variability under low dose irradiation sparking indirect processes and adaptive response The radiation ecology and epidemiology parts present data on the consequences of nuclear plants and related accidents for ecological systems and human beings Here some approaches to estimating radiation risks are also offered Evolution laws are demonstrated in the genomic universe plant microbe symbiosis stabilizing and destabilizing directional selection The last essay demonstrates the principles of organization operating in local animal populations which are approached as social organisms of complex systemic nature The chapter Radiation Induced Aging and Genetic Instability of Mesenchymal Stem Cells An Issue for Late Health Effects is available open access under a CC BY 4.0 license

*Story Of Genetics, Development And Evolution, The: A Historical Dialogue* Gaspar Jekely, 2017-11-24 This unique story offers an introductory conversation to genetics embryology and evolution taking us on a historical journey of biology through the ages Using a series of dialogues between the Greek philosopher Democritus and his disciple Alkimos we travel through time visiting eminent scientists throughout the centuries from Lazzaro Spallanzani and Theodor Boveri to Francis Crick Max Perutz and Christiane Nüsslein-Volhard We find ourselves at the intersection of competing theories in biology and witness the progression from the debunking the theory of spontaneous generation to the mapping of the genome Attention is given not only to the great successes in the field but also to the equally important and exciting failures Originally published in Hungarian The Story of Genetics Development and Evolution provides a historical background to the life sciences with complex scientific concepts stripped down and explained carefully for academics and anyone interested in going back to the roots and philosophies of scientific progress Translated from Jekely G Master are you awake A fictitious dialogue on genetics development and evolution 2006 Bratislava Kalligram

**Urban Evolutionary Biology** Marta Szulkin,Jason Munshi-South,Anne Charmantier,2020 Cities occupy about 3 per cent of the Earth s habitable land area and are home to one out of two humans worldwide both estimates are predicted to grow Urban space is thus becoming an important novel ecological niche for humans and wildlife alike Building on knowledge gathered by urban ecologists during the last half century evidence of evolutionary responses to urbanization has rapidly emerged Urban evolutionary biology is a nascent yet fast growing field of research and a fascinating testing ground for evolutionary biologists worldwide Urbanization offers a great range of opportunities to examine evolutionary processes because of the radically altered and easily quantifiable urban habitat and the large number of cities worldwide enabling rigorous replicated tests of evolutionary hypotheses Urban populations are increasingly exhibiting both neutral and adaptive evolutionary changes at levels ranging from genotypes to phenotypes The novelty of urban evolutionary biology is that these changes are driven by the cities we have built including effects of infrastructure pollution and social characteristics of our urban neighbourhoods It will thereby enrich the field of evolutionary biology with emergent yet incredibly potent new research themes where the urban habitat is key In a series of sixteen chapters written by leading evolutionary biologists working on urban drivers of evolution Urban Evolutionary Biology is the first academic book in the field It synthesizes current knowledge on evolutionary processes occurring literally on our doorstep across the globe and in each city independently Provided by publisher

*Beyond Bioethics* Osagie K. Obasogie, Marcy Darnovsky, 2018-03-13 For several decades the field of bioethics has played a dominant role in shaping the way society thinks about ethical problems related to developments in science technology and medicine But its traditional emphases on for example doctor patient relationships informed consent and individual autonomy have led the field to not be fully responsive to the challenges posed by new human biotechnologies such as assisted reproduction human genetic enhancement and DNA forensics *Beyond Bioethics* provides a focused overview for students and others grappling with the profound social dilemmas posed by these developments It brings together the work of cutting edge thinkers from diverse fields of study and public engagement all of them committed to a new perspective that is grounded in social justice and public interest values The contributors to this volume seek to define an emerging field of scholarly policy and public concern a new biopolitics Provided by publisher
