C.

Pacheco,Marley M. B. R. Vellasco,2009-01-30 The decision to invest in oil field development is an extremely complex problem even in the absence of uncertainty due to the great number of technological alternatives that may be used to the dynamic complexity of oil reservoirs which involves mul phase flows oil gas and water in porous media with phase change and to the complicated combinatorial optimization problem of choosing the optimal oil well network that is choosing the number and types of wells horizontal vertical directional m tilateral required for draining oil from a field with a view to maximizing its economic value This problem becomes even more difficult when technical uncertainty and e nomic uncertainty are considered The former are uncertainties regarding the existence volume and quality of a reservoir and may encourage an investment in information before the field is developed in order to reduce these uncertainties and thus optimize the heavy investments required for developing the reservoir The economic or market uncertainties are associated with the general movements of the economy such as oil prices gas demand exchange rates etc and may lead decision makers to defer vestments and wait for better market conditions Choosing the optimal investment moment under uncertainty is a complex problem which traditionally involves dynamic programming tools and other techniques that are used by the real options theory

Marketing Intelligent Systems Using Soft Computing Jorge Casillas, Francisco J. Martínez López, 2010-10-05 Dr Jay Liebowitz Orkand Endowed Chair in Management and Technology University of Maryland University College Graduate School of Management Technology 3501 University Boulevard East Adelphi Maryland 20783 8030 USA jliebowitz umuc edu

When I first heard the general topic of this book Marketing Intelligent Systems or what I ll refer to as Marketing Intelligence it sounded quite intriguing Certainly the marketing field is laden with numeric and symbolic data ripe for various types of mining data text multimedia and web mining It s an open laboratory for applying numerous forms of intelligentsia neural networks data mining expert systems intelligent agents genetic algorithms support vector machines hidden Markov models fuzzy logic hybrid intelligent systems and other techniques I always felt that the marketing and finance domains are wonderful application areas for intelligent systems and this book demonstrates the synergy between marketing and intelligent systems especially soft computing Interactive advertising is a complementary field to marketing where intelligent systems can play a role I had the pleasure of working on a summer faculty f lowship with R GA in New York City they have been ranked as the top inter tive advertising agency worldwide I quickly learned that interactive advertising also takes advantage of data visualization and intelligent systems technologies to help inform the Chief Marketing Officer of various companies Having improved ways to present information for strategic decision making through use of these technologies is a great benefit

Methods and Applications of Artificial Intelligence George A. Vouros, Themistoklis Panayiotopoulos, 2004-04-22 Arti cial intelligence has attracted a renewed interest from distinguished sci tists and has again raised new more realistic this time expectations for future advances regarding the development of theories models and techniques and the use of them in applications pervading many areas of our daily life The borders of human level intelligence are still very far away and possibly unknown Nev theless recent scienti c work inspires us to work even harder in our exploration of the unknown lands of intelligence This volume contains papers selected for presentation at the 3rd Hellenic Conference on Arti cial Intelligence SETN 2004 the o cial meeting of the Hellenic Society

for Artificial Intelligence EETN The first meeting was held in the University of Piraeus 1996 and the second in the Aristotle University of Thessaloniki AUTH 2002 SETN conferences play an important role in the dissemination of the innovative and high quality scientific results in artificial intelligence which are being produced mainly by Greek scientists in institutes all over the world However the most important effect of SETN conferences is that they provide the context in which people meet and get to know each other as well as a very good opportunity for students to get closer to the results of innovative artificial intelligence research

Protein Structure Prediction David Webster, 2008-02-03 The number of protein sequences grows each year yet the number of structures deposited in the Protein Data Bank remains relatively small The importance of protein structure prediction cannot be overemphasized and this volume is a timely addition to the literature in this field Protein Structure Prediction Methods and Protocols is a departure from the normal Methods in Molecular Biology series format By its very nature protein structure prediction demands that there be a greater mix of theoretical and practical aspects than is normally seen in this series This book is aimed at both the novice and the experienced researcher who wish for detailed information in the field of protein structure prediction a major intention here is to include important information that is needed in the day to day work of a research scientist important information that is not always decipherable in scientific literature Protein Structure Prediction Methods and Protocols covers the topic of protein structure prediction in an eclectic fashion detailing aspects of prediction that range from sequence analysis a starting point for many algorithms to secondary and tertiary methods on into the prediction of docked complexes an essential point in order to fully understand biological function As this volume progresses the authors contribute their expert knowledge of protein structure prediction to many disciplines such as the identification of motifs and domains the comparative modeling of proteins and ab initio approaches to protein loop side chain and protein prediction

Applying Computational Intelligence Arthur Kordon, 2009-11-28 In theory there is no difference between theory and practice But in practice there is Jan L A van de Snepscheut The flow of academic ideas in the area of computational intelligence has penetrated industry with tremendous speed and persistence Thousands of applications have proved the practical potential of fuzzy logic neural networks evolutionary computation swarm intelligence and intelligent agents even before their theoretical foundation is completely understood And the popularity is rising Some software vendors have pronounced the new machine learning gold rush to Transfer Data into Gold New buzzwords like data

mining genetic algorithms and swarm optimization have enriched the top executives vocabulary to make them look more visionary for the 21st century The phrase fuzzy math became political jargon after being used by US President George W Bush in one of the election debates in the campaign in 2000 Even process operators are discussing the performance of neural networks with the same passion as the performance of the Dallas Cowboys However for most of the engineers and scientists introducing computational intelligence technologies into practice looking at the growing number of new approaches and understanding their theoretical principles and potential for value creation becomes a more and more difficult task
