Sustainable Goat Production in the Changing Climate Veerasamy Sejian,M.V. Silpa,D. Thirunavukkarasu,2025-06-01

Sustainable Goat Production in the Changing Climate aims to make the global scientific and academic communities aware of the potential of goats as a livestock of the future When compared to more popular meat sources like cattle and swine goats have a lower carbon footprint and can aid in mitigating the effects of climate change as well as improving food production poverty and equity issues This book will discuss the implications of climate change on goat production systems and emphasize the physiological potential of goats to adapt to erratically changing climatic conditions Furthermore the book includes chapters on strategies to mitigate the effects of climate change on goat production and highlights novel technologies used to assess the impact of heat stress in goats Technology transfer strategies and policy related issues will also be covered Written and edited by an international team of experts on goats livestock animal agriculture and climate smart food systems *Sustainable Goat Production in the Changing Climate* will appeal to a broad audience from researchers to livestock specialists veterinarians and policymakers in food and sustainability Explores the potential of goats as future livestock species for animal origin foods Summarizes the impact of climate change on goats and goat production systems Proposes technological interventions ranging from management to bio technological solutions Identifies gaps in technology transfer activities and policymaking and provides solutions Triticale ,1989 History Triticale today Limitations and uncertainties Breeding triticale Food and feed uses Experiences around de world Research needs **Cytogenetics** P.  describes the history of genetic research the impact of genetic inheritance on his family and the potential for future
 applications of gene science Mukherjee's father and uncles struggled with disorders such as schizophrenia and bipolar
 disorder both of which are linked to genetic mutations After centuries of conjecture about the nature of familial inheritance
 naturalist Charles Darwin published his theory of evolution in 1859 In 1865 botanist Gregor Mendel proposed that genetic
 information is passed down from both the paternal and maternal sides of the family in the form of paired genes Thereafter
 eugenics gradually became socially accepted and programs to sterilize the disabled and deviant were established in the
 United States The practice of eugenics became socially abhorrent following World War II and the revelations of genocidal
 practices in Nazi Germany and Stalinist Russia Between 1908 and 1963 scientists continued studying genetic material
