National Childhood Vaccine-Injury Compensation Act United States. Congress. Senate. Committee on Labor and Human  
Resources,1984 **Vaccine** Mark A. Largent,2012-09-01 A thoughtful evaluation of the vaccine debate its history and its  
consequences Since 1990 the number of mandated vaccines has increased dramatically Today a fully vaccinated child will  
have received nearly three dozen vaccinations between birth and age six Along with the increase in number has come a  
growing wave of concern among parents about the unintended side effects of vaccines In Vaccine Mark A Largent explains  
the history of the debate and identifies issues that parents pediatricians politicians and public health officials must address  
Nearly 40% of American parents report that they delay or refuse a recommended vaccine for their children Despite  
assurances from every mainstream scientific and medical institution parents continue to be haunted by the question of  
whether vaccines cause autism In response health officials herald vaccines as both safe and vital to the public s health and  
put programs and regulations in place to encourage parents to follow the recommended vaccine schedule For Largent the  
vaccine autism debate obscures a constellation of concerns held by many parents including anxiety about the number of  
vaccines required including some for diseases that children are unlikely ever to encounter unhappiness about the rigorous  
schedule of vaccines during well baby visits and fear of potential side effects some of them serious and even life threatening  
This book disentangles competing claims opens the controversy for critical reflection and provides recommendations for

**Values and Vaccine Refusal** Mark Navin, 2015-09-16 Parents in the US and other societies are increasingly refusing to vaccinate their children even though popular anti vaccine myths e g vaccines cause autism have been debunked This book explains the epistemic and moral failures that lead some parents to refuse to vaccinate their children First some parents have good reasons not to defer to the expertise of physicians and to rely instead upon their own judgments about how to care for their children Unfortunately epistemic self reliance systematically distorts beliefs in areas of inquiry in which expertise is required like vaccine immunology Second vaccine refusers and mainstream medical authorities are often committed to different values surrounding health and safety For example while vaccine advocates stress that vaccines have low rates of serious complications vaccine refusers often resist vaccination because it is unnatural and because they view vaccine preventable diseases as a natural part of childhood Finally parents who refuse vaccines rightly resist the utilitarian moral arguments for the greater good that vaccine advocates sometimes make Unfortunately vaccine refusers also sometimes embrace a pernicious hyper individualism that sanctions free riding on herd immunity and that cultivates indifference to the interpersonal and social harms that unvaccinated persons may cause
