

IMPORTANT SAFETY NOTICE

The information in this service guide is intended for use by individuals possessing skill and experience in electrical, electronic, and mechanical appliance repair. Any attempt to repair a major appliance may result in personal injury and property damage. The manufacturer or seller cannot be responsible for the interpretation of this information, nor can it assume any liability in connection with its use.

RECONNECT ALL GROUNDING DEVICES

If grounding wires, screws, straps, clips, nuts, or washers used to complete a path to ground are removed for service, they must be returned to their original position and properly fastened.

WHAT TO DO IF YOU SMELL GAS:

- Do not try to light a match, or cigarette, or turn on any gas or electrical appliance.
- Do not touch any electrical switches. Do not use any phone in your building.
- Clear the room, building, or area of all occupants.
- Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions carefully.
- If you cannot reach your gas supplier, call the fire department.

IMPORTANT

Electrostatic Discharge (ESD) Sensitive Electronics

ESD problems are present everywhere. ESD may damage or involve the electronic control assembly. The error control assembly may appear to work well after repair is finished, but failure may occur at a later date due to ESD stress.

- Use an anti-static wrist strap. Connect wrist strap to green ground connection point or unpainted metal in the appliance.

OR:

Touch your finger regularly to a green ground connection point or unpainted metal in the appliance.

- Before removing the part from its package, touch the anti-static bag to a green ground connection point or unpainted metal in the appliance.

- Avoid touching electronic parts or terminal contacts; handle electronic control assembly by edges only.

- When repackaging failed electronic control assembly in anti-static bag, observe the instructions above.

WARNING!

- Disconnect the power and turn off gas before servicing.
- When you disconnect for servicing, be sure to take gloves and careful cabinet edge.
- Failure to follow these instructions can result in death or electrical shock.
- All resistance testing must be done with the power disconnected.
- Power supply can hold a charge for some time after the cord is unplugged or power is shut off. ALWAYS short power cord pins to ground before servicing.
- When measuring live voltages, be sure wear insulated gloves to avoid electric shock. Use caution to prevent short circuits with your test equipment.
- Do not wear jewelry such as necklaces or rings when working with live circuits as contact with live circuits by these objects can result in bodily injury and/or damage to the product.

DIAGNOSTIC GUIDE

Before servicing, check the following:

- Make sure there is power at the wall outlet.
- Has a fuse blown or circuit breaker tripped? Time delay fuse?
- Is the dryer vent properly installed and clear of lint or obstructions?
- Check all connections before replacing components. Look for broken or loose wires, fused terminals, or wires not pressed into connectors far enough.
- The most common cause for control failure is corrosion on connectors. Therefore, disconnect and reconnecting wires will be necessary throughout test procedures.
- Connectors: Look at the top of connector. Check for broken or loose wires. Check for wires not pressed into connector far enough to engage metal latches.
- Resistance checks must be made with power cord unplugged from outlet.

DIAGNOSTIC TESTS

This TEST should be used by qualified service personnel only. Activating the heater manually without water in the sump may trip the thermal fuse in the fusor. DO NOT trip the door switch to activate the heater without water in the sump.

ACTIVATING THE DIAGNOSTIC TEST MODE

1. UNIT must be in standby (unit plugged in, display off).
2. Press POWER while pressing MORE TIME and LESS TIME simultaneously.
