Pumphrey NRIC This book draws on the authors many years of teaching children aged three to eight years and also on their extensive research with children in the home nursery and school The authors explain the development and range of young children s mathematical marks and visual representations showing how children make mental connections between their own early marks and subsequent abstract mathematical symbolism and go on to develop their own written methods Combining theory and practice this acclaimed book demonstrates how children s own mathematical graphics are highly creative and show deep levels of thinking The authors show how this is the key to success in school mathematics and to higher levels of achievement The authors are winners of TACTYC s 2003 Jenefer Joseph Award for the Creative Arts 3 8 awarded for their innovative work with children on mathematical graphics Assessing Children's Writing Kate Allott,2019-02-11 This book provides the support that trainee and beginning teachers need to enable them to teach and assess writing The book covers all the main aspects of writing both compositional and transcriptional including those where the National Curriculum has very little detail *Children with Specific Language Impairment, second edition* Laurence B. Sally Neaum,Author,2021-02-24 What comes before phonics The teaching of phonics is now strongly embedded in early literacy teaching in schools and early years settings and it has been shown to be an important part of becoming literate There is however significant concern about the formalising of phonics teaching for very young children So what should we be focusing on in early years What comes before this formal teaching What do children need to know and experience to enable them to access phonics teaching with success This book looks in detail at the knowledge understanding skills and attitudes that children need to enable them to come to phonics teaching ready to learn and with a good chance of success The second edition has been updated to include the latest research and enhanced support on working with parents and carers      *Experimental Approaches to the Acquisition of Information Structure* Tania L. Leal,Bradley Hoot, Stavros Skopeteas,Joseph V. Casillas ,Oksana Laleko,2025-08-19 Human languages constrain the form utterances can take with constraints on grammaticality being but one example Beyond grammaticality utterances can vary in terms of their infelicity depending on how constituents relate to the surrounding discourse context speakers communicative needs and speakers assessment of the hearers beliefs The study of information structure explores how speakers package their utterances into blocks with varying informational values formalizing these units with notions like focus background or topic These categories among others have been the subject of substantial interest and debate in linguistics generating both theoretical models and experimental studies bearing on how information structure is represented and interpreted in the minds of speakers and how particular information structural categories are encoded in the grammar However the study of how information structure is acquired is still fledgling with uneven coverage across populations and languages Similarly the wide cross linguistic variation in the use of syntactic prosodic and morphological means of its expression has been a major stumbling block in the development of a solid methodological foundation for experimental investigations As things stand the field is ripe for contributions from more varied

approaches and drawing on linguistic data from under represented languages and populations
