Constructive Evolution Michael Chapman, 1988-06-24 This book represents an attempt to understand the evolution of Jean Piaget's basic ideas in the context of his own intellectual development Piaget sought to elucidate human knowledge by studying its origins and development In this book Michael Chapman applies the same method to Piaget's own thinking Dr Chapman shows that some of the Swiss psychologist's essential ideas originated in adolescent philosophical speculations about the relation between science and value These same ideas were then developed step by step in Piaget's investigations of children's cognitive development Dr Chapman claims that Piaget's use of developmental psychology as a means for addressing questions about the evolution of knowledge has been misunderstood by psychologists approaching his work exclusively from the perspectives of their own discipline Reconstructing Piaget's intellectual biography makes possible a better understanding of the questions he originally posed and the answers he subsequently provided Dr Chapman concludes with an assessment of Piaget's relevance for contemporary psychology and philosophy and suggests ways in which Piagetian theory might be further developed

Pouthas,William J. Friedman,2013-04-17 This volume is the outcome of the NATO Advanced Research Workshop on Time Action and Cognition which was held in Saint Malo France in October 1991 The theme time in action and cognition of time was sparked by growing awareness in informal meetings between mostly French speaking time psychologists of the need to bring together time specialists in the areas of development motor behavior attention memory and representations The workshop was designed to be a forum where different theoretical points of view and a variety of empirical approaches could be presented and discussed Time psychologists tended to draw conclusions restricted to their specific fields of interest From our own experience we felt that addressing a common issue possible relationships between time in action and representations of time could lead to a more comprehensive approach We are indebted to NATO for allowing us to bring this idea to fruition We take this opportunity as well to express our thanks to Cognisciences Cognisud section an active interdisciplinary research organization for its financial backing and the CNRS for its scientific support

Conceptual Structure in Childhood and Adolescence Christine Howe,2015-12-22 Heat breaks up charcoal and puts sulphur dioxide in The air pulls faster on heavy masses These and other similar statements by school aged children untutored in physics carry two messages First children s pre instructional conceptions of the physical world are a far cry from the received wisdom of science second despite their lack of orthodoxy children s conceptions carry a definite sense of causal mechanism This sense of mechanism is the focal concern of this book originally published in 1998 for it raises issues of central importance to both psychological theory and educational practice In particular some psychologists have claimed that human cognition is organised around causal mechanisms along the lines of a theory This carries specific implications for teaching Does the existence in children s thinking of causal mechanisms relating to the physical world support these psychologists Does this have consequences for the teaching of science Christine Howe reviews evidence relating to pre instructional conceptions in three broad topic areas heat and temperature force and motion floating and sinking A wide range of published work is discussed including the author s own research In addition a new study covering all three topic areas is reported for the first time The message is that causal mechanisms can indeed play an organising role that untutored

cognition can in other words be genuinely theoretical However this tendency is highly domain specific occurring in some topic areas but not in others Having drawn these conclusions Christine Howe discusses their meaning in terms of both cognitive development and educational practice A model is outlined which synthesises Piagetian action groundedness with Vygotskian cultural symbolism and has a distinctive message for classrooms This title will be useful to cognitive and developmental psychologists and to science educators alike
